Contributions to the advance of the integration density of CubeSats Grau, Sebastian, 2019-09-17 This thesis investigates potential technologies to increase the integration density of CubeSats Observations of the CubeSat market and missions are recorded in order to derive design criteria for high performance single unit CubeSats A promising approach to increased integration density is relocation of the components of multiple satellite subsystems to form a highly integrated multi functional solar panel Eligible components are usually allocated to the communication system the electric power system or the attitude determination and control system In a joint research project development optimization and miniaturization of those components in order to form a highly integrated multi functional solar panel is investigated The author first summarizes the development work of the project partners for a picosatellite solar antenna and puts it into

relation to the overall solar panel design Advantage of using solar antennas over simple patch antennas is the reduced loss of solar cell area and hence available electric power that is usually accompanied by the usage of higher frequency bands for broadband payload data transmission Magnetic attitude actuators are the backbone of CubeSat attitude control In order to increase their performance and lower their resource consumption numerical optimization of the commonly used three coil types is investigated by the author This leads to the formulation of a novel optimization approach which is better suited to real world considerations for magnetic actuator design Results from the application of the optimization procedure show potential for every coil type The state of the art of a novel type of attitude control actuators so called fluid dynamic actuators which are based on angular momentum exchange is advanced by the author by introducing miniaturized 3D printed conduits for single unit CubeSat applications Following development and functional verification actuators are compared to existing reaction wheel systems which shows their superiority for agile attitude maneuvers and integration with the satellite bus Further investigation exploits additive manufacturing technologies to create redundancy concepts using four actuators with three dimensional conduits Finally development optimization and miniaturization of subsystem components is brought together in the design assembly and test of a highly integrated multi functional solar panel Analysis of a single unit CubeSat design that applies different configurations of the multi functional solar panel shows the potential for more than 50% payload mass and payload volume This brings integration density of single unit CubeSats to a level similar to that of the larger triple unit form factors currently employed for the New Space mega constellations Diese Dissertation untersucht m gliche Technologien zur Erh hung der Integrationsdichte von CubeSats Beobachtungen des CubeSat Marktes und ausgew hlte Missionen werden zusammengetragen um Entwurfskriterien f r hochperformante 1U CubeSats abzuleiten Ein vielversprechender Ansatz zur Erh hung der Integrationsdichte ist der Umzug von Komponenten verschiedener Satellitensubsysteme auf ein zu entwickelndes hochintegriertes multifunktionales Solarpaneel Infrage kommende Komponenten sind f r gew hnlich dem Kommunikationssystem dem Energieversorgungssystem oder dem Lageregelungssystem zugeordnet In Rahmen eines gemeinschaftlichen Forschungsvorhabens wurden Entwicklung Optimierung und Miniaturisierung ausgew hlte Komponenten eines solchen hochintegrierten multifunktionalen Paneels untersucht Durch den Autor wird zun chst die Entwicklung einer Solarantenne f r Pikosatelliten durch den Projektpartner zusammengefasst und in Zusammenhang um Entwurf des Solarpaneels gebracht Der Vorteil einer Solarantenne gegen ber einer einfachen Patch Antenne ist der geringere Verlust an Solarzellenfl che und damit zur Verf gung stehender elektrischer Leistung der blicherweise mit der Verwendung h herer Frequenzb nder zur breitbandigen Nutzlastdaten bertragung einhergeht Magnetische Lageregelungsaktuatoren bilden das R ckgrat der CubeSat Lageregelung Um deren Leistungsf higkeit zu erh hen und den Ressourcenverbrauch zu verringern wird durch den Autor die numerische Optimierung der drei gebr uchlichen Spulentypen untersucht Dies f hrt zur Formulierung eines neuartigen Optimierungsansatzes welcher besser f
