A Local Matter:

A Minimalist Ontology of the Natural World Michael Esfeld, Dirk-Andre Deckert, 2017-10-25 This book seeks to work out which commitments are minimally sufficient to obtain an ontology of the natural world that matches all of today's well established physical theories We propose an ontology of the natural world that is defined only by two axioms 1 There are distance relations that individuate simple objects namely matter points 2 The matter points are permanent with the distances between them changing Everything else comes in as a means to represent the change in the distance relations in a manner that is both as simple and as informative as possible The book works this minimalist ontology out in philosophical as well as mathematical terms and shows how one can understand classical mechanics quantum field theory and relativistic physics on the basis of this ontology Along the way we seek to achieve four subsidiary aims a to make a case for a holistic individuation of the basic objects ontic structural realism b to work out a new version of Humeanism dubbed Super Humeanism that does without natural properties c to set out an ontology of quantum physics that is an alternative to quantum state realism and that avoids any ontological dualism of particles and fields d to vindicate a relationalist ontology based on point objects also in the domain of relativistic physics *FCC Record* United States. Naturalistic World View: Scientific method and epistemology Abner Shimony, 1993 Abner Shimony is one of the most eminent of present day philosophers of science whose work has exerted a profound influence in both the philosophy and physics communities This two volume collection of his essays written over a period of forty years explores the interrelations between science and philosophy Shimony regards the knowing subject as an entity in nature whose faculties must be studied from the points of view of evolutionary biology and empirical psychology He maintains that the twentieth century is one of the great ages of metaphysics given the deep implications of quantum mechanics relativity theory and molecular biology

Nevertheless he rejects the thesis that mentality is entirely explicable in physical terms and argues that mind has a fundamental place in nature Though distinguishing between values and scientifically established facts Shimony holds that the sense of wonder cultivated by the natural sciences is one of the noblest of human values The first volume *Scientific Method and Epistemology* deals with the dialectic of subject and object epistemic probability induction and scientific theories perception and conception and fact and values The focus of the second volume *Natural Sciences and Metaphysics* is on quantum mechanical measurement and non locality parts and wholes time and mind and matter Publisher s description
