Baseline Abatement Practice Problems And Possibilities:

Options for reducing greenhouse gas emissions from agriculture and food systems Vos, Rob, Martin, Will, 2025-05-21 Food systems generate about one third of global greenhouse gas GHG emissions Without reducing them it will not be possible to stabilize the climate and keep the increase in global temperature below 1.5 °C from pre industrial levels About 50 percent of agricultural emissions in CO₂eq come from methane a super potent GHG mostly from livestock production and rice cultivation We consider six broad potential approaches to reducing emissions from agriculture emission taxes repurposing of farm support regulations and conditionality investing in green innovations emission reduction credits and demand side interventions We find that carbon taxes on most agricultural production emissions are likely much less effective than for emissions from combustion Simple rearrangement or reduction of agricultural support will have only small impacts in terms of improving human and planetary health By contrast repurposing agricultural support towards R D on sustainable agricultural intensification could generate major efficiency gains sharply reduce emissions and improve food security Regulatory approaches including conditionality and payment for environmental services PES can be counterproductive if they lower yields and require expansion of agricultural land use The potential benefits of emission reduction credits are greatly diminished by challenges in defining their baselines Demand interventions designed to contribute both to environmental goals and improvements in health outcomes may also play a supporting role Since multiple sustainable development goals are to be achieved no single instrument by itself will be effective Instead multiple policy instruments will need to be bundled and targeted to create synergies and address trade offs

Flexibility in Global Climate Policy Tim Jackson, Stuart Parkinson, 2023-04-21 Since the adoption of the Kyoto Protocol to the United Nations Framework Convention on Climate Change in 1997 the negotiation of policy responses to climate change has become an area of major research This authoritative volume sets out the main debates and processes of joint implementation bilateral or multilateral investments in greenhouse gas emission reduction or sequestration and explores the issues involved in constructing an appropriate institutional framework It examines the key economic environmental social and ethical impacts and assesses the operational design of the flexibility mechanisms of joint implementation including emissions trading and the Clean Development Mechanism An approach is developed in which streamlined assessment procedures are combined with institutional safeguards in order to balance the demand for practical mechanisms with the environmental objectives of the Protocol The book provides detailed case studies of energy sector investment in Eastern European host countries

European Emissions Trading in Practice Stefano Clò, 2011 Emission markets are crucial both to provide the right incentives to reduce GHG emissions and to fund investments necessary for a transition to a low carbon world Emission markets however cannot achieve these objectives if inappropriately designed This book is a novel and fresh attempt to look at the real functioning of the EU Emission Trading Scheme and to assess its effectiveness and inconsistencies its positive and

negative impacts on industrial and financial markets With the overall objective to improve its design and performance Carlo Carraro University of Venice Italy this important book has the great achievement of addressing a complicated and socially highly debated issue of how society could be given optimal incentives for emission reductions from a legal and economic perspective Moreover it not only addresses the various issues from a theoretical perspective but provides important empirical evidence on the working of emissions trading as well The book will undoubtedly have important lessons not only at the theoretical level but also for policy makers interested in improving the effectiveness of emission trading schemes From the foreword by Michael Faure This unique and up to date book analyses the functioning of the European Emissions Trading Scheme ETS and assesses the extent to which relevant legislation has affected its capacity to promote cost effective reduction of European carbon emissions The author investigates whether inefficiency has been caused by both the ETS cap setting procedure and by the ETS relevant allocation rule as defined by Directive 2003 87 EC He then considers whether the new Directive 2009 29 EC which reforms the ETS institutional design is likely to improve the scheme s effectiveness by reducing the risk of carbon leakage which could potentially be a consequence of implementing a unilateral policy across the asymmetric political landscape of Europe This well documented book will appeal to researchers and postgraduate students in environmental law and environmental economics as well as policymakers within environment industry and economics and electric and industrial operators and stakeholders Environmental NGOs energy and environmental consulting groups members of the European Commission and energy and environmental think tanks will also find much to interest them in this insightful book

The Economics of Climate Change Mitigation Policies and Options for Global Action beyond 2012 OECD,2009-09-18 Against the background of a projected doubling of world greenhouse gas emissions by mid century this book explores feasible ways to abate them at least cost

Emissions Trading Thomas Tietenberg,2010-09-30 First published in 1985 Emissions Trading was a comprehensive review of the first large scale attempt to use economic incentives in environmental policy in the U S and of the empirical and theoretical research on which this approach is based Since its publication it has consistently been one of the most widely cited works in the tradable permits literature The second edition of this classic study of pollution reform considers how the use of transferable permits to control pollution has evolved looks at how these programs have been implemented in the U S and internationally and offers an objective evaluation of the resulting successes failures and lessons learned over the last twenty five years

Carbon Abatement Costs and Climate Change Finance William R Cline,2011-07-15 Examines the likely abatement costs associated with keeping global warming within the 2 degree Celsius above preindustrial temperature ceiling and discusses what would need to be invested annually up until the year 2020 to maintain the goal

Challenges and Opportunities for the World's Forests in the 21st Century Trevor Fenning,2013-12-03 This book addresses the challenges and opportunities faced by the world s forests posed by climate change conservation objectives and sustainable development needs including bioenergy outlining the research and other

efforts that are needed to understand these issues along with the options and difficulties for dealing with them It contains sections on sustainable forestry forest resources worldwide forests forestry and climate change the economics of forestry tree breeding biotechnological approaches genomic studies with forest trees bio energy lignin and forest science including ecological studies The chapters are contributed by prominent organisations or individuals with an established record of achievement in these areas and present their ideas on these topics with the aim of providing a ready source of information and guidance on these topics for politicians policy makers and scientists for many years to come OECD Working Papers ,1999 **Dépenses de Lutte Contre la Pollution Dans Les Pays de L'OCDE** ,1996 Pollution Prevention and Abatement Handbook, 1998 ,1999 Originally developed to help staff clients and consultants prepare and implement operations supported by the Bank Group this Handbook updates and replaces the Environmental Guidelines issued in 1988 and reflects changes both in technology and in pollution management policies and practices It focuses attention on the environmental and economic benefits of preventing pollution and emphasizes cleaner production and good management techniques BOOK JACKET
