Agents As Objects With Knowledge Base State:

Agents As Objects With Knowledge Base State Nikolaos Skarmas, 1999-03-19 Advances in computer technology in general and computer networks in particular have significantly affected the requirements of modern applications where the need to operate in decentralised environments is of primary importance The conceptual models of the applications are also becoming complex and semantically rich A promising technology towards the design and development of systems of such domains is agent based systems Agents having a knowledge component act and interact with other agents and information sources in order to achieve some goals Platforms intended for supporting the development of such systems should offer a number of features including communication concurrency mobility high level data structures object orientation etc This book describes the design and implementation of such a language platform called April and its use on a number of applications Methodologically in designing and implementing the language a layered approach has been adopted April has been developed as a series of macro defined layers on top of the relatively primitive features of a pre existing language called April On top of April an agent layer has been built as a set of pre defined classes for constructing agent based systems This layer has been customised for specific application domains considered This includes a mobile agent application a distributed database application and a network management one *Intelligent Agents VIII* John-Jules C. Meyer, Milind Tambe, 2003-08-01 This volume is the eighth in the Intelligent Agents series associated with the ATAL workshops These workshops on Agent Theories Architectures and Languages have established themselves as a tradition and play the role of small but internationally well known conferences on the subject where besides theory per se also integration of theory and practice is in focus Specifically ATAL dresses issues of theories of agency software architectures for intelligent agents methodologies and programming languages for realizing agents and software tools for applying and evaluating agent based systems ATAL 2001 featured two special tracks in which both the more theoretical formal and the more practical aspects were present viz Formal Theories of Negotiation organized by Frank Dignum and Agents for Hand Held Mobile or Embedded Devices organized by Tim Finin There was also an extra session on RoboCup Rescue organized and presented by Satoshi Tadokoro and Ranjit Nair ATAL 2001 attracted 68 papers from over 20 countries all over the world of which 30 were selected for presentation at the workshop and publication in this volume We invited two outstanding speakers Fausto Giunchiglia Trento Italy and Tom Dean Brown USA *Intelligent Agents for Telecommunications Applications* Sahin Albayrak, 1998 Intelligent agent and distributed AI DAI approaches attach specific conditions to cooperative exchanges between intelligent systems that go far beyond simple functional interoperability Ideally systems that pursue local or global goals coordinate their actions share knowledge and resolve conflicts during their interactions within groups of similar or dissimilar agents can be viewed as cooperative coarse grained systems The infrastructure of telecommunications is a world in transition There are a number of trends that contribute to this convergence of traditional telephony and data network worlds blurring of

boundaries between public and private networks complementary evolution of wireline wireless and cable network infrastructures the emergence of integrated broadband multimedia networks and of course the information superhighway Up to now despite the effort that has gone into this area the field of intelligent agents research has not yet led to many fielded systems Telecommunications applications pose strong requirements to agents such as reliability real time performance openness security management and other integrated management and mobility In order to fulfil their promise intelligent agents need to be fully dependable and typically require an integrated set of capabilities This is the challenge that exists for intelligent agents technology in this application domain

Intelligent Agents Michael J. Wooldridge, 1995-01-26 This volume coherently present 24 thoroughly revised full papers accepted for the ECAI 94 Workshop on Agent Theories Architectures and Languages There is currently considerable interest from both the AI and the mainstream CS communities in conceptualizing and building complex computer systems as collections of intelligent agents This book is devoted to theoretical and practical aspects of architectural and language related design and implementation issues of software agents Particularly interesting is the comprehensive survey by the volume editors which outlines the key issues and indicates via a comprehensive bibliography topics for further reading In addition a glossary of key terms in this emerging field and a comprehensive subject index is included
