Can Cities, States and Regions Save Our Planet? Arnault Barichella,2023-06-19 This book examines the potential for cities states and regions to take decisive action on climate change at the local level Local action constitutes an essential component of global efforts to keep temperatures below the 2 C Paris Agreement threshold Focusing on three green municipal leaders New York Boston and Paris this volume examines their multilevel interactions with higher governance echelons in the United States and France Even though these countries are located on different continents similar patterns emerge on both sides of the Atlantic This book explores the key role of municipalities and sub state entities in shaping the climate policy agenda vis vis national governments in the US and France It argues that inadequate articulation of multilevel governance may jeopardize efforts to limit global temperature increase below the 2 C threshold by the end of the century

Sustainability David Mollica,2017-03-02 Sustainability is one of the key concepts underlying our thinking about corporate responsibilities particularly with respect to the environment and inter generational justice but also in relation to corporate governance and the long term economic viability The advantages of the discourse of Sustainability are that it brings together contemporary economic and moral imperatives in the context of scientific knowledge Its disadvantages relate to its open ended content its systematic ambiguity and the internal tensions between economic growth human survival and global justice The essays in this volume reflect these strengths and weaknesses from a variety of viewpoints economic scientific social and philosophical They illustrate and illuminate the varied and contested content and utility of this currently popular concept and point to its multiple implications for the development of corporate responsibilities

Political Ecology David Bell,Leesa Fawcett,Roger Keil,Peter Penz,2005-08-18 Political Ecology addresses environmental issues which Innis was concerned with from a contemporary political economy perspective They explore a wide range of themes and issues including sustainability risk and regulation population growth planetary management impact of humanity on environment role of technology and communication Case studies provide further insight into issues such as industrial racism women and development and collective action by highlighting ethical and political questions and providing critical insights into the issues and debates in political ecology

Learning To Think And Act Environmentally: While There Is Still Time Lester W. Mibrath,1999 *Environmental Policy is Social Policy - Social Policy is Environmental Policy* Isidor Wallimann,2014-07-08 This book argues that social and environmental policy should be synthetically treated as one and the same field that both are but two aspects of the same coin if sustainability is the goal Such a paradigm shift is indicated important and timely to effectively move towards sustainability This book is the first to take this approach and to give examples for it Not to synthetically merge the two fields has been and will continue to be

highly insufficient inefficient and contradictory for policy and public administration aiming for a transformation towards a sustainable world In general social problems are dealt with in one policy corner and environmental problems in another Rarely is social policy at large concerned with its impact on the environment or its connection with and relevance to environmental policy Equally environmental problems are generally not seen in conjunction with social policy even though much environmental policy directly relates to health nutrition migration and other issues addressed by social policy This book intends to correct the pattern to separate these very significant and large policy fields Using examples from diverse academic and applied fields it is shown how environmental policy can and should be thought of as social policy and how social policy can and should simultaneously be seen as environmental policy Tremendous benefits are to be expected

International Environmental Politics Lee-Anne Broadhead,2002 Broadhead political science University College of Cape Breton Nova Scotia writes from a deepening concern that the very way environmental issues are thought about and the negotiations that result from their common framing are themselves leading to the further deterioration of the natural environment The author owes her brand of critique to the Frankfurt School especially in terms of its analysis of the Enlightenment notion of nature scientifically knowable and technologically domitable Showing how Enlightenment thought informs international relations Broadhead targets green diplomacy the way that national and international financial bodies counter environmental critique how globalization is sold as inevitable irresistible and beneficial and how international agreements on ozone depletion and climate change fail their stated aims So as not to end in dialectic negation Broadhead offers positive alternatives to green diplomacy Annotation copyrighted by Book News Inc Portland OR

Encyclopedia of American Foreign Policy Glenn P. Hastedt,2014-05-14 Presents an A to Z reference guide that examines United States foreign policy

Sustainability through Participation? Birgit Peters,Eva Julia Lohse,2023-07-03 Can and should participation be a means of achieving sustainability The concepts of sustainability and participation are both in vogue and many international supranational and national legal texts and standards refer to these two concepts However there are still several unanswered questions that invite legal inquiry which sustainability Which kinds of participation Participation by whom How are the two concepts of sustainability and participation effectively interlinked in legal provisions This book approaches the interconnection between sustainability and participation inductively and precisely in areas of law which are commonly associated with sustainability and sustainable development national European and international environmental and economic law
