## **Blueprints Maths:**

*Blueprints* Marcus du Sautoy, 2025-09-09 A stunning book a thrilling read Peter Frankopan that reveals how creative people can harness the profound and productive relationship between mathematics and the arts When Shakespeare has the Three Witches cast Macbeth's lot he uses something very weird to do it not simply eye of newt and toe of frog but the number seven And when Hamlet claims To be or not to be that is the question Shakespeare reaches for eleven For Shakespeare prime numbers were magical And he is not alone As Marcus du Sautoy showcases in *Blueprints* creativity is inseparable from mathematics The designs of Le Corbusier and Leonardo the music of Glass Bach and Debussy the wild visions of Dali the choreography of Laban the animation of Pixar all are shot through with mathematics from primes and fractals to the weirder worlds of Hamiltonian cycles and hyperbolic geometry And Du Sautoy argues that the relationship runs both ways Just as mathematics inspires new art the artistic mindset is a necessity for discovering new mathematics *Blueprints* will expand your mind but more importantly it shows how to ignite your imagination Anyone who wants to create needs this book

**Blueprint for the Future** National Research Council, Policy and Global Affairs, Committee on Women in Science, Engineering, and Medicine, Committee on Status and Participation of Women in STEM Disciplines and Careers, 2012-10-02 The scientific work of women is often viewed through a national or regional lens but given the growing worldwide connectivity of most if not all scientific disciplines there needs to be recognition of how different social political and economic mechanisms impact women's participation in the global scientific enterprise Although these complex sociocultural factors often operate in different ways in various countries and regions studies within and across nations consistently show inverse correlations between levels in the scientific and technical career hierarchy and the number of women in science the higher the positions the fewer the number of women Understanding these complex patterns requires interdisciplinary and international approaches In April 2011 a committee

overseen by the National Academies standing Committee on Women in Science Engineering and Medicine CWSEM convened a workshop entitled Blueprint for the Future Framing the Issues of Women in Science in a Global Context in Washington D C CWSEM s goals are to coordinate monitor and advocate action to increase the participation of women in science engineering and medicine The scope of the workshop was limited to women s participation in three scientific disciplines chemistry computer science mathematics and statistics The workshop presentations came from a group of scholars and professionals who have been working for several years on documenting analyzing and interpreting the status of women in selected technical fields around the world Examination of the three disciplines chemistry computer science and mathematics and statistics can be considered a first foray into collecting and analyzing information that can be replicated in other fields The complexity of studying science internationally cannot be underestimated and the presentations demonstrate some of the evidentiary and epistemological challenges that scholars and professionals face in collecting and analyzing data from many different countries and regions Blueprint for the Future Framing the Issues of Women in Science in a Global Context summarizes the workshop presentations which provided an opportunity for dialogue about the issues that the authors have been pursuing in their work to date
