The Birds of Ireland Richard John Ussher, Robert Warren, 1900 To the Ends of the Earth Anthony McGeehan, 2018

Migration is a way of life for most birds found in Ireland Our nation sits with its back to the Old World and its face to the New World so the variety of bird species reaching our shores is derived from two hemispheres From across the planet our birds come to breed stop off or spend the winter How these visitors reached our shores puzzled us for centuries So how do birds navigate so successfully over enormous distances and make a return trip to the same nesting site each year Modern tracking results are revealing journeys once thought impossible such as sustained flight for days at a time Feats of endurance are one thing but their homing ability is even more impressive Most of the youngsters fly solo to faraway winter quarters they have never seen The evidence and some of the history behind its discovery is pieced together in a simple way that brings a new coherence to the complex ways that birds navigate the preparations they make before departure and their decisions en route such as when drifted off course by inclement weather In a nutshell birds array of sense far exceeds our own Rather than relying purely on the sun and the stars for guidance birds make use of something we cannot sense the Earth's magnetic field Overall they integrate a range of global phenomena including patterns of polarised light visible to their specially tuned vision in the sky This spectacular book is a must for anyone who has ever wondered how and why these seemingly fragile creatures make such gruelling journeys
