Proctor, Patrick J. Lynch, 1993-01-01 Here is a volume that has no parallel A good reference book for those interested in the details of avian

The Ptarmigan's Dilemma John Theberge, Mary Theberge, 2011-04-05 Winner of the 2010 Lane Anderson Award Drawing on breakthrough research in evolution genetics and on their extensive work in the field and lab wildlife biologists John and Mary Theberge explain for non scientists the real facts of life Birds that suddenly grow gall bladders when their species has none Moose with antlers so big they encumber their movement through the forest Butterflies that risk extinction by overwintering en masse These are just a few stories the Theberges tell in their examination of what the mechanisms of evolution are and how they work With examples from the very latest discoveries in genetics and ones they have made in their own field work The Ptarmigan's Dilemma is a ground breaking explanation of evolution for non scientists By marrying the separate sciences of ecology and genetics the Theberges paint a picture far richer than either discipline can alone of how for almost 4 billion years life on Earth has evolved into the rich diversity that's under threat today Along the way they explain just what the survival of the fittest really means how dramatic evolutionary changes can take place in just one generation and how our too little knowledge of or interest in how life on Earth organizes and supports itself is rapidly making us a danger to ourselves

Scientific American, 1894

The Pig Who Sang to the Moon Jeffrey Moussaieff Masson, 2007-12-18 Jeffrey Moussaieff Masson's groundbreaking bestseller When Elephants Weep was the first book since Darwin's time to explore emotions in the animal kingdom particularly from animals in the wild Now he focuses exclusively on the contained world of the farm animal revealing startling irrefutable evidence that barnyard creatures have feelings too even consciousness Weaving history literature anecdotes scientific studies and Masson's own vivid experiences observing pigs cows sheep goats and chickens over the course of five years this important book at last gives voice meaning and dignity to these gentle beasts that are bred to be milked shorn butchered and eaten Can we ever know what makes an animal happy Many animal behaviorists say no But Jeffrey Masson has a different view An animal is happy if it can live according to its own nature Farm animals suffer greatly in this regard Chickens for instance like to perch in trees at night to avoid predators and to nestle with friends The obvious conclusion They cannot be happy when confined twenty to a cage From field and barn to pen and coop Masson bears witness to the emotions and intelligence of these remarkable farm animals each unique with distinct qualities Curious intelligent self reliant many will find it hard to believe that these attributes describe a pig In fact there is much that humans share with pigs They dream know their names and can see colors Mother cows mourn the loss of their calves when their babies are taken away to slaughter Given a choice between food that is nutritious or lacking in

minerals sheep will select the former balancing their diet and correcting the deficiency Goats display quite a sense of humor dignity and fearlessness Indian goats have been known to kill leopards Chickens are naturally sociable they will gather around a human companion and stand there serenely preening themselves or sit quietly on the ground beside someone they trust For far too long farm animals have been denigrated and treated merely as creatures of instinct rather than as sentient beings Shattering the abhorrent myth of the dumb animal without feelings Jeffrey Masson has written a revolutionary book that is sure to stir human emotions far and wide **Scientific American** ,1975 **The Vital Dimension** Carl Gunther,2006-08 The nature of life is at the center of national debate Are we mere material mechanisms Or is life a vast nonphysical dimension that organizes matter Does God exist The issue is not academic The question defines the nature of human reality What are the limits of consciousness Do our memories exist in our brains or in the vastness of time The Vital Dimension examines the thoughts of eminent scientists such as the Nobel Prize Winners Erwin Schrödinger Werner Heisenberg and Sir John Eccles who concluded that life is a mysterious force unknown to modern science The Vital Dimension embraces René Descartes admonition Doubt all that can be doubted to look beyond the rigid preconceptions of mechanistic biology and construct a truly radical theory of life More than mere speculation the weight of scientific evidence points to the fact that the modern material view of reality is on the verge of a profound revolution The world stands at the threshold to the Vital Dimension Dare we open the door
