Circular Economy and Waste Valorisation Jingzheng Ren, Long Zhang, 2022-08-23. The authors and editors of this volume state that with the intensive growth of global industrialization and urbanization the consumption of various resources and materials such as energy minerals and even water is increasing at an amazing speed which poses great pressure on material resources. In addition the massive utilization of materials has led to low efficiency resulting in great wastes of resources as well as serious environmental pollutions and degradation which has severely hindered the sustainable development of economy and society. In order to transit to sustainable development it is necessary to improve resource efficiency and circular economy and waste valorization are the best alternative ways for achieving this goal. This book aims to provide an in depth description of circular economy and waste valorization make assessments for circular economy and waste valorization in different regions and countries and determine the technological pathways and roadmap for achieving circular economy and waste valorization. More specifically:

- 1 Conceptions and Theories Concepts and definitions of circular economy and waste valorization and their nexus and contributions to sustainable development

Energy Generation and Value Addition from Environmental Microfiber Pollution Through Advanced Greener

Solution Alok Prasad Das,Ipsita Dipamitra Behera,Narayan Prasad Das,2024-02-24 The majority of clothes we use regularly are made up of plastic based materials like polyester rayon nylon and acrylic When these garments are washed in laundries they give out tiny plastic fragments termed microfibers which end up in the environment and more precisely in the oceans Plastic and synthetic polymer wastes which are often irresponsibly discarded into natural habitats undergo bio fragmentation to give out huge amounts of microplastics and microfibers Synthetic microfiber pollution has been reported in diverse ecosystems ranging from land and aquatic ecosystem to shorelines and seafloors Due to the miniature size of the microfibers it is difficult to detect investigate and prevent this type of pollution that is occurring on a larger scale It is estimated that millions of tons of microfibers are released into the ocean from various sources They are more toxic because they are more persistent and take a long time to degrade and it gets accumulated in the environment along with other pollutants This increases the chances of living organisms in the biosphere ingesting the synthetic microfibers causing harm to the ecosystem and entering into the food chain adversely affecting human beings It had become a great field of research because of its abundance and the challenges in the identification of synthetic and semisynthetic microfibers from the environmental

samples and the time it takes to be degraded This book focuses on renewable energy generation and value addition from environmental microfiber pollution through advanced greener solution thus building an economic supportable society as an elementary need of developing countries
