Bubbly Bubble:

Bubbly Bubble Coleen A. Hitchcock, 2001-07 While blowing bubbles Madison Page is surprised to see one of her bubbles is alive **Bubble Dynamics and Interface Phenomena** John R. Blake, Jeremy M. Boulton-Stone, Neale H.

Thomas, 2012-12-06 This volume contains papers presented at the IUTAM Symposium on Bubble Dynamics and Interface Phenomena held at the University of Birmingham from 6-9 September 1993 In many respects it follows on a decade later from the very successful IUTAM Symposium held at CALTECH in June 1981 on the Mechanics and physics of bubbles in liquids which was organised by the late Milton Plesset and Leen van Wijngaarden The intervening period has seen major development with both experiment and theory On the experimental side there have been advances with very high speed photography and data recording that provide detailed information on fluid and interface motion Major developments in both computer hardware and software have also led to extensive improvement in our understanding of bubble and interface dynamics although development is still limited by the sheer complexity of the laminar and turbulent flow regimes often associated with bubbly flows The symposium attracts wide and extensive interest from engineers physical chemical biological and medical scientists and applied mathematicians The scientific committee sought to achieve a balance between theory and experiment over a range of fields in bubble dynamics and interface phenomena It was our intention to emphasise both the breadth and recent developments in these various fields and to encourage cross fertilisation of ideas on both experimental techniques and theoretical developments The programme and the proceedings recorded herein cover bubble dynamics sound and wave propagation bubbles in flow sonoluminescence acoustic cavitation underwater explosions bursting bubbles and ESWL Managing Credit Bubbles Alberto Martin, Jaume Ventura, 2014-06-09 We study a dynamic economy where credit is limited by insufficient collateral and as a result investment and output are too low In this environment changes in investor sentiment or market expectations can give rise to credit bubbles that is expansions in credit that are backed not by expectations of future profits i.e. fundamental collateral but instead by expectations of future credit i.e. bubbly collateral

During a credit bubble there is more credit available for entrepreneurs this is the crowding in effect But entrepreneurs must also use some of this credit to cancel past credit this is the crowding out effect There is an optimal bubble size that trades off these two effects and maximizes long run output and consumption The equilibrium bubble size depends on investor sentiment however and it typically does not coincide with the optimal bubble size This provides a new rationale for macroprudential policy A lender of last resort can replicate the optimal bubble by taxing credit when the equilibrium bubble is too high and subsidizing credit when the equilibrium bubble is too low This leaning against the wind policy maximizes output and consumption Moreover the same conditions that make this policy desirable guarantee that a lender of last resort has the resources to implement it **Bubbly Bubble** Coleen A. Hitchcock, 2001-07-01 NULL **Housing Bubbles** Sergi

Basco, 2018-10-01 This book provides an accessible yet formal framework to understand how housing bubbles arise their

international dimension their consequences and ways to prevent them scar Jord University of California Davis USA Basco s analysis blends in a very rigorous but enjoyable manner state of the art theory and historical examples adding also a very timely and valuable set of policy orientations scar Arce Director General Banco de Espa a Madrid Spain Booms and busts of house prices are a recurrent feature throughout history This book provides a comprehensive overview of the origins and economic consequences of these housing bubbles The book starts with a formal definition of asset price bubbles and a summary of the most famous episodes before describing how economists have thought about asset price bubbles specifically behavioral vs rational interpretations These theories are applied to the special case of housing and the same framework is used to explain the implications of financial globalization for capital flows and housing bubbles After analyzing its origins the economic consequences of housing bubbles for both households and firms are derived and documented The final sections are devoted to discussing the effects of financial crises and explain how financial regulation could mitigate the emergence of future housing bubbles Case studies of the recent housing bubbles in the United States and Spain are also featured in the book This book will be of value to advanced undergraduate macroeconomic courses as well as researchers in international economics and macroeconomics and policy makers

IUTAM Symposium on Waves in Liquid/Gas and Liquid/Vapour Two-Phase Systems
Shigeki Morioka, Leen van Wijngaarden, 2012-12-06 A IUTAM symposium on Waves in Liquid Gas and Liquid Vapor Two Phase Systems was held in Kyoto Japan 9 13 May 1994 Sixty three scientists participated coming from ten countries and forty two lectures were presented The list of participants and the program are included in this volume The symposium was held in response to the request of the participants in the IUTAM symposium Adiabatic Waves in Liquid Vapor System held at Gottingen in 1989 At that time the need for another symposium in about five years had been indicated by all the participants This symposium intends to develop the subject of wave properties in more general liquid gas two phase systems Topics in this symposium may be classified as 1 waves in liquid gas bubble systems including interfacial effects 2 waves in gas vapor droplets systems 3 waves in films or stratified systems 4 waves with liquid vapor transition 5 waves with vapor liquid transition 6 wave propagation near the critical point and 7 waves with low pressure effect As for topic 1 experiments numerical simulations and analytical approaches to waves in bubbly liquids were discussed The importance of interbubble interactions through the liquid field is now well established at least in terms of potential theory There was also a progress concerning the well posedness of governing equations for void waves For pressure waves there were some new phenomena such as bubble cluster formation and the occurrence of three dimensional structures in addition to a progress from more qualitative studies to quantitative ones
