Carbon Footprints as Cultural-Ecological Metaphors Anita Girvan, 2017-10-10 Through an examination of carbon footprint metaphors this book demonstrates the ways in which climate change and other ecological issues are culturally and materially constituted through metaphor. The carbon footprint metaphor has achieved a ubiquitous presence in Anglo North American public contexts since the turn of the millennium yet this metaphor remains under examined as a crucial mediator of political responses to the urgent crisis of climate change. Existing books and articles on the carbon footprint typically treat this metaphor as a quantifying metric with little attention to the shifting mediations and practices of the carbon footprint as a metaphor. This gap echoes a wider gap in understanding metaphors as key figures in mediating more than human relations at a time when such relations profoundly matter. As a timely intervention this book addresses this gap by using insights from environmental humanities and political ecology to discuss carbon footprint metaphors in popular and public texts. This book will be of great interest to researchers and students of environmental humanities, political ecology, environmental communication and metaphor studies. [The Carbon Footprint of Everything](#) Mike Berners-Lee, 2022-04-26 I can't

remember the last time I read a book that was more fascinating and useful and enjoyable. Bill Bryson: Reduce your carbon footprint and understand the issue with this up to date life guide for carbon conscious readers. Kirkus: Calculate your carbon footprint with an item by item breakdown. Meet your company's carbon goals using the latest research. Covid 19 and the carbon battle: understand the new global supply chain. The Carbon Footprint of Everything breaks items down by the amount of carbon they produce, creating a calorie guide for the carbon conscious. With engaging writing, leading carbon expert Mike Berners-Lee shares new carbon calculations based on recent research. He considers the impact of the pandemic on the carbon battle, especially the embattled global supply chain and adds items we didn't consider a decade ago like bitcoin and other cryptocurrencies. Supported by solid research, cross referenced with other expert sources, illustrated with easy to follow charts and graphs and written with Berners-Lee's trademark sense of humor, The Carbon Footprint of Everything should be on everyone's bookshelf. The Carbon Footprint of Everything is an extensively revised and updated edition of How Bad Are Bananas. **Ecological Footprints of Climate Change** Uday Chatterjee, Angela Oyilieze Akanwa, Suresh Kumar, Sudhir Kumar Singh, Abira Dutta Roy, 2023-01-01 This book explores global implications of human activities that trigger changes in climate and the appropriate scientific, adaptive and sustainable approaches as a proven information tool. It reveals that the ecological, social and economic dynamics of the changing earth encompass huge uncertainties coupled with its ability to be linked to other forms of global change. From a scientific perspective, multiple efforts are expedient to integrate the many aspects of global changes. Increases in science and technology have afforded nations the ability to plan for the future by investing in adaptive and mitigative measures to monitor present and future changes. Just as the climatic and ecological impacts of climate change are unequally distributed, so is the adaptive capacity to cope with these impacts in different

nations Considering that wealth infrastructure and political stability all contribute to a nation's capacity to anticipate and respond to change So global South nations who are disadvantaged in these areas are faced with more inequalities and more unique adaptive strategies There is need for increased aggregate efforts and interaction between scientists stakeholders and policy makers to improve both decision making and global change in science Scientists and researchers need to work on expanding the range of policies that are proposed debated and implemented This way novelty new ideas and methodologies are infused into the society At this point of multiple climate footprints there is an immense need to explore all ideas evaluating their possibilities in presenting alternative futures developing alternative policies and adaptive options to solve the intractable ecological footprints of climate change
