perspectives one focusing on the politics of resource access and the other on the construction and perception of knowledge their work is actually more closely aligned now than ever before Knowing Nature brings together political ecologists and science studies scholars to showcase the key points of encounter between the two fields and how this intellectual mingling creates a lively and more robust ecological framework for the study of environmental politics The contributors all actively work at the interface between these two fields and here they use empirical material to explore questions of theoretical and practical import for understanding the politics that surround nature society relations from wildlife management in the Yukon to soil fertility in Kenya In addition they examine how various environmental knowledge claims are generated packaged promoted and accepted or rejected by the different actors involved in specific cases of environmental management conservation and development Finally they ask what is at stake in the struggles surrounding environmental knowledge how such struggles shape conceptions of the environment and whose interests are served in the process
