CSEET

The theme of CSEET was **Professionalization of Software Engineering**. Leonard Tripp, President of the IEEE Computer Society, summarized it as:

Emerging critical social and economic factors have created a situation where it is vital that software engineering progress as a profession as soon as possible.

It is becoming critical for the profession to be defined both legally and technically. Tripp goes on to identify four key areas being addressed in the activities to turn software engineering into a profession:

1. To clarify the "engineering" aspects of software engineering, establishing the boundary between software engineering and its related disciplines
2. To harmonize software engineering practices and consensus standards, contributing to the establishment of a repeatable basis for practicing software engineering
3. To identify the body of knowledge of software engineering, providing a foundation for software engineering education
4. To identify baseline performance expectations for a practicing software engineer, providing a basis for the certification and licensing of individuals

This conference concentrated on three main themes:

1. Professional Issues (Accreditation, Licensing, Ethics)
 - Achieving Industrial Relevance in Software Engineering Education
 - Teaching Software Project Management
 - Putting the *Personal Software Process* (PSP) into Practice
 - Experience Factory-Based Professional Education and Training
 - Merging Software Engineering and Security Engineering
2. Training Curricula and Distance Education
 - Tracking and Evaluating Industry/University Collaborations for Software Engineering Education and Training
 - Distance Education
 - State of the Software Engineering Profession
3. Undergraduate and Graduate Curricula

- Status Report from the ACM/IEEE-CS Task Forces on Software Engineering Curriculum and Body of Knowledge
 - *Software Engineering Code of Ethics and Professional Practice*
 - Mandatory Licensing of Software Engineers
- Software Metrics (including PSP Metrics)
- Recommended Skills and Knowledge for Software Engineers, including skills and knowledge for
 - Software Product Engineering
 - Software Quality Assurance
 - Software Product Deployment
 - Software Engineering Management

Details on these topics (and others) can be found in the conference proceedings (a copy can be purchased from the IEEE).

Several trends can be observed, both at this conference and on the Internet/Web:

- The shortage of skilled software personnel in industry and academia continues and appears to be accelerating. There is also a similar shortage of professors in the colleges and universities to teach the material. While the number of students adopting Computer Science as a major is dropping significantly (I previously reported a 42% drop in enrollment over previous years), the faculty population seems to be dropping faster (caused by both retirement and a movement to higher paying jobs in industry). Some professors I spoke to at the conference mentioned enrollment as high as 250 students with 2-4 professors to cover the courses. Reliance on adjunct faculty from industry is at an all-time high, and availability of adjunct faculty is diminishing.
- The Personal Software Process (PSP) is increasingly being viewed as a significant tool for improving software quality. I've studied it to some degree but have not yet applied it; however, I've received a relatively large number of inputs from what I consider to be proficient practitioners who have taken a course in it (feeling initially that it's just another controversy like the CMM) and come out believing that it is effective and really works. They have reported significant increases in productivity and quality, and they also keep metrics on their work regularly. I have not yet judged the PSP for myself.
- Licensing of software engineers is becoming a reality. Texas was the first state to require software engineers to carry a license (but the Texas law applies only to commercial software engineers, specifically excluding DoD contractors). From simple observation, it's clear that software engineering can have severe consequences just like civil engineering, from people dying when medical equipment malfunctions due to software bugs to major loss of money and inconvenience when major communications systems (such as New York City) shut down due to software bugs (both of these have happened). Our increasing dependence on computers (especially embedded computers) is resulting in a feeling of urgency in many circles for the licensing and

Document Supply Centre, 2002 Empirical Methods and Studies in Software Engineering Reidar Conradi, Alf Inge Wang, 2003-08-20 Nowadays societies crucially depend on high quality software for a large part of their functionalities and activities Therefore software professionals researchers managers and practitioners alike have to competently decide what software technologies and products to choose for which purpose For various reasons systematic empirical studies employing strictly scientific methods are hardly practiced in software engineering Thus there is an unquestioned need for developing improved and better qualified empirical methods for their application in practice and for dissemination of the results This book describes different kinds of empirical studies and methods for performing such studies e g for planning performing analyzing and reporting such studies Actual studies are presented in detail in various chapters dealing with inspections testing object oriented techniques and component based software engineering Issues in Informing Science & Information Technology. Volume 9 (2012) Eli B. Cohen, 2012 **Software Engineering** Andrea de Lucia, Filomena Ferrucci, 2009-01-22 Software engineering is widely recognized as one of the most exciting stimulating and profitable research areas with a significant practical impact on the software industry Thus training future generations of software engineering researchers and bridging the gap between academia and industry are vital to the field The International Summer School on Software Engineering ISSSE which started in 2003 aims to contribute both to training future researchers and to facilitating the exchange of knowledge between academia and industry This volume constitutes a collection of articles originating from tutorial lectures

given during the last three ISSSE summer schools as well as a number of contributions on some of the latest findings in the field of software engineering The book is organized in three parts on software requirements and design software testing and reverse engineering and management
