Mendenhall author *Cosmos, Earth and Nutrition* Richard Thornton Smith, 2013-04-03 In recent years there has been an explosion of interest in organic and biodynamic produce. Although once marginal and alternative, escalating concerns about the environment, health, food quality, and animal welfare have brought organics into mainstream consciousness. Biodynamics, a unique development of the organic approach, does not narrowly focus on agricultural techniques. It was conceived as a new way of thinking about farming, nutrition, and the world of nature, allowing for a revitalized relationship with the living soil, the elemental world, and the cosmos. Originating from a series of eight lectures given by Dr. Rudolf Steiner in 1924, biodynamics broadens the outlook of agriculture and the science behind it, leading to a holistic perspective that incorporates astronomical rhythms and unique preparations for plants and earth. The author describes the foundations on which not only biodynamics but also the wider organic movement is based. He builds bridges between mainstream science and Steiner's insights, making it easier for the wider organic and ecological movement to approach biodynamic concepts and practise. This book has much to offer to the beginner as well as to those already involved with biodynamics. Its broad range of topics, including the ecology of the farm, organism, food quality, and nutrition, community-supported agriculture, planetary influences, seed quality, and the vitality of water, contribute to a deeper understanding of the subject. The author is also concerned to promote innovation so that biodynamics moves with the times. An appendix includes details for contacting various elements of the biodynamic world.

DR RICHARD THORNTON SMITH was formerly a geography professor at the University of Leeds, specializing in soil science, environment, and conservation. Widely travelled, he has a long-standing interest in indigenous and sustainable farming. He was introduced to the work of Rudolf Steiner at an early age, although his full involvement with biodynamics dates from 1990, when he began to participate in training programmes and workshops at Emerson College, Sussex. In 1996, he began a biodynamic extension programme in Sri Lanka, for which he published a book, most recently updated in 2007. Since 2001, he has been an inspector for the Biodynamic Association's Demeter and Organic Certification in the UK. In 2003, he produced an edited selection of Steiner's work relating to agriculture. He is currently a council member of the Biodynamic Agricultural Association and lives in Ross-on-Wye, Herefordshire.

Exploring Agrodiversity H. C. Brookfield, 2001 Small farmers are often viewed as engaging in wasteful practices that wreak ecological havoc. *Exploring Agrodiversity* sets the record straight. Small farmers are, in fact, ingenious and inventive and engage in a diverse range of land management strategies, many of them resourcefully geared toward conserving resources, especially soil. Using case studies from Africa, Asia, Latin America, and the Pacific, this book provides an in-depth analysis of agricultural diversity and explores its history.
