Biomaterials for Surgical Operation Shuko Suzuki, Yoshito Ikada, 2011-12-21 Biomaterials for Surgical Operation offers a review of the latest advances made in developing bioabsorbable devices for surgical operations which include surgical adhesives sealants barriers for the prevention of tissue adhesion polymers for fractured bone fixation growth factors for the promotion of wound healing and sutures Over the years many descriptions of biomaterials have appeared in academic journals and books but most of them have been devoted to limited clinical areas This is in marked contrast with this volume which covers a wide range of bioabsorbable devices used in surgery from a practical point of view The currently applied polymeric devices are critical in surgery but all involve serious problems due to their poor performance For instance fibrin glue the most widely used surgical sealant can produce only a weak gel with low adhesive strength to tissues accentuating the limited effectiveness of current treatment options Likewise the currently available barrier membranes cannot fully prevent tissue adhesion at the acceptable level and are moreover not easy to handle with endoscopes due to their poor mechanical properties Biomaterials for Surgical Operation is aimed at those who are interested in expanding their knowledge of how the problems associated with the currently used devices for surgical operation can be solved It primarily focuses on the absorbable biomaterials which are the main components of these medical devices

Printed Biomaterials Roger Narayan, Thomas Boland, Yuan-Shin Lee, 2009-11-26 Recent studies have shown that novel processing and modeling techniques may be used to create patient specific prostheses artificial tissues and other implants using data obtained from magnetic resonance imaging computed tomography or other imaging techniques For example customized prostheses may be fabricated that possess suitable features including geometry size and weight for a

given medical condition Many advances have been made in the development of patient specific implants in the past decade yet this information is not readily available to scientists and students Printed Biomaterials Novel Processing and Modeling Techniques for Medicine and Surgery provides the biomaterials scientist and engineer as well as advanced undergraduate or graduate students with a comprehensive discussion of contemporary medical implant research and development The development of printed biomaterials is multidisciplinary and includes concepts traditionally associated with engineering materials science medicine and surgery This text highlights important topics in these core fields in order to provide the fundamentals necessary to comprehend current processing and modeling technologies and to develop new ones

Biomaterials in Hand Surgery Antonio Merolli, Thomas J. Joyce, 2009-11-05 Biomaterials are used in many areas of medicine particularly in surgery and dentistry In orthopedic surgery total hip arthroplasty has been extremely successful and has been called the operation of the 20th century Total hip arthroplasty is routinely performed every day in most orthopedic departments Over the last decades many efforts have been made to better integrate the components within the recipient bones to decrease the friction at the prosthetic interface and to minimize wear Minimally invasive procedures have been developed and various designs are intended to preserve as much as possible of the bone stock of young patients By contrast the clinical results have been less favorable after various hand and wrist joint replacements Many early designs have failed the clinical data of the current prostheses are frequently quite limited and there is often insufficient biomechanical information available although trapezio metacarpal arthroplasty in particular has become quite popular in recent years In order to promote progress in hand and wrist arthroplasty Antonio Merolli and Thomas J Joyce have edited this lovely book whose chapters discuss current research and recent advances in hand and wrist arthroplasty The problems of metacarpophalangeal joint prostheses are particularly developed
