Biomathematical Problems In Optimization Of Cancer Radiotherapy:

Biomathematical Problems in Optimization of Cancer Radiotherapy A.Y. Yakovlev, L. Pavlova, L.G. Hanin, 2020-11-25
Biomathematical Problems in Optimization of Cancer Radiotherapy provides insight into the role of cell population heterogeneity in the optimal control of fractionated irradiation of tumors. The book emphasizes the mathematical modeling aspect of the problem and presents the state of the art in the stochastic description of irradiated cell survival. Some of the results are of general theoretical interest and can be applied to other areas of optimal control methodology. Detailed explanations of all mathematical statements are provided throughout the text. The book is excellent for biomathematicians, radiotherapists, oncologists, health physicists, and other researchers and students interested in the topic. *National Library of Medicine Current Catalog* National Library of Medicine (U.S.), 1993

Optimization Problems in Radiotherapy for Hypoxic Tumors Alexei V. Chvetsov, 2025-06-24
This book highlights the mathematical aspects of treatment outcomes analysis and dose optimization in radiotherapy for heterogeneous hypoxic tumors. Hypoxia is a major factor of cancer resistance to radiotherapy treatment and is present in most tumors encountered in humans. The author tried to present a systematic consideration of radiotherapy for hypoxic tumors but the emphasis was put on mathematical content of the problems. The book contains new approaches to the concepts of tumor control probability, equivalent uniform dose, and radiotherapy dose optimization for hypoxic tumors developed by the author. Significant attention in this book is paid to comparison of models with measured and clinical data; therefore, the reduction of model parameters to overcome overfitting, model parsimony was followed as much as possible. [Stochastic Models of Tumor Latency and Their Biostatistical Applications](#) Andrej Yu Yakovlev, A. D. Tsodikov, B. Asselain, 1996
This research monograph discusses newly developed mathematical models and methods that provide biologically meaningful inferences from data on cancer latency produced by follow-up and discrete surveillance studies. Methods for designing optimal strategies of cancer surveillance are systematically presented for the first time in this book. It offers new approaches to the stochastic description of tumor latency, employs biologically based models for making statistical inference from data on tumor recurrence, and also discusses methods of statistical analysis of data resulting from discrete surveillance strategies. It also offers insight into the role of prognostic factors based on the interpretation of their effects in terms of parameters endowed with biological meaning, as well as methods for designing optimal schedules of cancer screening and surveillance. Last but not least, it discusses survival models allowing for cure rates and the choice of optimal treatment based on covariate information and presents numerous examples of real data analysis.

Mixed Models Eugene Demidenko, 2005-01-28
A rigorous self-contained examination of mixed model theory and application. Mixed modeling is one of the most promising and exciting areas of statistical analysis, enabling the analysis of nontraditional clustered data that may come in the form of shapes or images. This book provides in-depth mathematical coverage of mixed models, statistical properties, and numerical algorithms, as well as applications such as the

analysis of tumor regrowth shape and image Paying special attention to algorithms and their implementations the book discusses Modeling of complex clustered or longitudinal data Modeling data with multiple sources of variation Modeling biological variety and heterogeneity Mixed model as a compromise between the frequentist and Bayesian approaches Mixed model for the penalized log likelihood Healthy Akaike Information Criterion HAIC How to cope with parameter multidimensionality How to solve ill posed problems including image reconstruction problems Modeling of ensemble shapes and images Statistics of image processing Major results and points of discussion at the end of each chapter along with Summary Points sections make this reference not only comprehensive but also highly accessible for professionals and students alike in a broad range of fields such as cancer research computer science engineering and industry **Advances**

O Arino,David E Axelrod,Marek Kimmel,1997-12-04 This book presents a new approach to the subject of cosmology It fully exploits Einstein s theory of general relativity It is found that the most general formal expression of the theory replaces the 10 component tensor formalism with a 16 component quaternion formalism This leads to a unified field theory where one field incorporates gravitation and electromagnetism The theory predicts an oscillating universe cosmology with a spiral configuration Dark matter is explained in terms of a sea of particle antiparticle pairs each in a particular derived ground state This leads to an explanation for the separation between matter and antimatter in the universe There is a brief discussion of black holes and pulsars The final chapter delves into philosophical considerations such as the different types of truth positivism versus realism and a discussion of the role of the Mach principle in physics and cosmology a **Statistical Modeling for Biological Systems** Anthony Almudevar,David

Oakes,Jack Hall,2020-03-11 This book commemorates the scientific contributions of distinguished statistician Andrei Yakovlev It reflects upon Dr Yakovlev s many research interests including stochastic modeling and the analysis of micro array data and throughout the book it emphasizes applications of the theory in biology medicine and public health The contributions to this volume are divided into two parts Part A consists of original research articles which can be roughly grouped into four thematic areas i branching processes especially as models for cell kinetics ii multiple testing issues as they arise in the analysis of biologic data iii applications of mathematical models and of new inferential techniques in epidemiology and iv contributions to statistical methodology with an emphasis on the modeling and analysis of survival time data Part B consists of methodological research reported as a short communication ending with some personal reflections on research fields associated with Andrei and on his approach to science The Appendix contains an abbreviated vitae and a list of Andrei s publications complete as far as we know The contributions in this book are written by Dr Yakovlev s collaborators and notable statisticians including former presidents of the Institute of Mathematical Statistics and of the Statistics Section of the AAAS Dr Yakovlev s research appeared in four books and almost 200 scientific papers in mathematics statistics

biomathematics and biology journals Ultimately this book offers a tribute to Dr Yakovlev s work and recognizes the legacy of his contributions in the biostatistics community *KfK* ,1994 The Cumulative Book Index ,1995 A world list of books in the English language Automatic Control and Computer Sciences ,2004
