Recognised and Harmed Georgios Bouchagiar, 2023-11-25 Private face recognition technologies are increasingly entering the private and public sphere with no adequate checks and balances. This comprehensive and important new reference work explores crucial regulatory challenges stemming from the use of private face recognition technologies in Europe. After detecting technological neutrality in law, legal uncertainty in case law, and the risk of over-surveillance, it recommends an ex ante and targeted classification approach with a view to minimising privacy harms. Under the proposed scheme, an expert agency can scrutinise a given technology, balance conflicting

stakes classify that technological use and finally give a go no go or go in condition decision before its actual implementation in the real world Recommended for legal and technology researchers and scholars focusing on surveillance and privacy as well as government regulatory and civil rights agencies

Advanced Biometrics David Zhang,Guangming Lu,Lei Zhang,2017-08-08 This book describes a range of new biometric technologies such as high resolution fingerprint finger knuckle print multi spectral backhand 3D fingerprint tongueprint 3D ear and multi spectral iris technologies Further it introduces readers to efficient feature extraction matching and fusion algorithms in addition to developing potential systems of its own These advanced biometric technologies and methods are divided as follows 1 High Resolution Fingerprint Recognition 2 Finger Knuckle Print Verification 3 Other Hand Based Biometrics and 4 New Head Based Biometrics Traditional biometric technologies such as fingerprint face iris and palmprint have been extensively studied and addressed in many research books However all of these technologies have their own advantages and disadvantages and there is no single type of biometric technology that can be used for all applications Many new biometric technologies have been developed in recent years especially in response to new applications The contributions gathered here focus on how to develop a new biometric technology based on the requirements of essential applications and how to design efficient algorithms that yield better performance
