Biophysical Neural Networks Foundation:

Biophysical Neural Networks Roman R. Poznanski, 2001 Modeling of neural networks has been in the past mostly associated with the computer analogy All this is to change in a volume dedicated to providing a clear exposition of the biophysical and biochemical processes that underpin the functioning of single neurons in networks The contents serve as an invaluable reference to the subject of biologically more plausible neural networks This book will provide a thorough understanding of quantitative modeling with each chapter containing abundant references and a set of problems to challenge the inspiring post graduate student or researcher

On the Contexts of Things Human Ronald J. MacGregor, 2006 The study of isoperimetric inequalities involves a fascinating interplay of analysis geometry and the theory of partial differential equations Several conjectures have been made and while many have been resolved a large number still remain open One of the principal tools in the study of isoperimetric problems especially when spherical symmetry is involved is Schwarz symmetrization which is also known as the spherically symmetric and decreasing rearrangement of functions The aim of this book is to give an introduction to the theory of Schwarz symmetrization and study some of its applications The book gives an modern and up to date treatment of the subject and includes several new results proved recently Effort has been made to keep the exposition as simple and self contained as possible A knowledge of the existence theory of weak solutions of elliptic partial differential equations in Sobolev spaces is however assumed Apart from this and a general mathematical maturity at the graduate level there are no other prerequisites

Foundations and Tools for Neural Modeling Jose Mira, Juan V. Sanchez-Andres, 2006-12-08 This book constitutes together with its companion LNCS 1607 the refereed proceedings of the International Work Conference on Artificial and Natural Neural Networks IWANN 99 held in Alicante Spain in June 1999 The 89 revised papers presented were carefully reviewed and selected for inclusion in the book This volume is devoted to foundational issues of neural computation and tools for neural modeling The papers are organized in parts on neural modeling biophysical and structural models plasticity phenomena maturing learning and memory and artificial intelligence and cognitive neuroscience

Fuzzy-Neuro Approach to Agent Applications Raymond S.T. Lee, 2006-03-28 Anything happens must have its own reason Although I cannot really recall exactly when I heard of this statement for the first time it is always in my mind and in fact it has been one of the motivations for me to carry out research and study When I asked myself again about the purpose of writing this book at the time of writing this preface several add on reasons that had never occurred to me at the start of writing this book in the spring of 2003 surprisingly came up Back then when I was preparing the progress report for the iJADE 2.0 project a fuzzy idea of whether it was feasible to write a book on intelligent agents came to my mind This book not only would discuss and deal with the theory but also the spin off applications from the iJADE project including the iJADE WeatherMan the iJADE Stock Advisor the iJADE Surveillant and the latest works on iJADE Negotiator The fact that I had to launch the iJADE development kit officially over the Web in the summer of 2003 <http://www>

ijadk.org and to arrange courses and seminars to teach and train our undergraduate students to make use of this tool kit further supported the idea and the future use of this book Hence the archetype of this book emerged

Modeling in the Neurosciences G. N. Reeke, R. R. Poznanski, K. A. Lindsay, J. R. Rosenberg, O. Sporns, 2005-03-29 Computational models of neural networks have proven insufficient to accurately model brain function mainly as a result of simplifications that ignore the physical reality of neuronal structure in favor of mathematically tractable algorithms and rules Even the more biologically based integrate and fire and compartmental styles of modeling suffice

Foundations and Tools for Neural Modeling José Mira, 1999 This book constitutes together with its companion LNCS 1606 the refereed proceedings of the International Work Conference on Artificial Neural Networks IWANN 99 held in Alicante Spain in June 1999 The 91 revised papers presented were carefully reviewed selected for inclusion in the book This volume is devoted to applications of biologically inspired artificial neural networks in various engineering disciplines The papers are organized in parts on artificial neural nets simulation implementation image processing engineering applications

Epilepsy as a Dynamic Disease John Milton, Peter Jung, 2013-04-17 A brain defibrillator may be closer than we think An epileptic seizure involves a paroxysmal change in the activity of millions of neurons Feedback control of seizures would require an implantable device that could predict seizure occurrence and then deliver a stimulus to abort it To examine the feasibility of building such a device this text brings together experts in epilepsy bio engineering and dynamical systems theory Topics include the development of epileptic systems seizure prediction neural synchronization wave phenomena in excitable media and the control of complex neural dynamics using brief electrical stimuli
