Biochemical Analysis of Membranes A. H. Maddy, 1976 **Methods of Biochemical Analysis** David Glick, 2009-09-25

Biochemical analysis is a rapidly expanding field and is a key component of modern drug discovery and research. *Methods of Biochemical Analysis* provides a periodic and authoritative review of the latest achievements in biochemical analysis. Founded in 1954 by Professor David Glick, *Methods of Biochemical Analysis* provides a timely review of the latest developments in the field.

Biochemistry of Lipids, Lipoproteins and Membranes Dennis E. Vance, J.E. Vance, 2002-12-06

The first edition of this book was published in 1985. The content of the 4th edition reflects the enormous advances that have occurred since that time in the field of lipid biochemistry. This publication is unique in that it represents a bridge between the superficial coverage of the lipid field found in basic biochemistry text books and the highly specialized material contained in scientific review articles and monographs. The book is not a collection of exhaustive reviews but a current and readable summary of diverse aspects of lipids. It is intended as an advanced and up to date textbook for teachers and students who are familiar with the basic concepts of lipid biochemistry and will also serve as a general reference book for scientists studying lipids, lipoproteins and membranes.

Biochemistry of Lipids, Lipoproteins and Membranes J.E. Vance, Dennis E. Vance, 1991-12-17

The second edition of this book on lipids, lipoprotein and membrane biochemistry has two major objectives: to provide an advanced textbook for students in these areas of biochemistry and to summarise the field for scientists pursuing research in these and related fields. Since the first edition of this book was published in 1985, the emphasis on research in the area of lipid and membrane biochemistry has evolved in new directions. Consequently, the second edition has been modified to include four chapters on lipoproteins. Moreover, the other chapters have been extensively updated and revised so that additional material covering the areas of cell signalling by lipids, the assembly of lipids and proteins into membranes and the increasing use of molecular biological techniques for research in the areas of lipid, lipoprotein and membrane biochemistry have been included. Each chapter of the textbook is written by an expert in the field but the chapters are not simply reviews of current literature. Rather, they are written as current, readable summaries of these areas of research which should be readily understandable to students and researchers who have a basic knowledge of general biochemistry. The authors were selected for their abilities both as researchers and as communicators. In addition, the editors have carefully coordinated the chapters so that there is little overlap yet extensive cross referencing among chapters.

Research Grants Index National Institutes of Health (U.S.). Division of Research Grants, 1975 **Research Awards Index**, 1988 *Freeze-Fracture Studies of Membranes* Sek Wen Hui, 2018-01-18

This volume is a kind of celebration of the progress of freeze fracture electron microscopy in recent years. Many of the authors are leaders of the advancing front. Instead of offering an instruction manual of how to perform new techniques or a review to recover what has happened in the past in respect fields both which are abundantly available as journal articles and monographs, this volume is a collection of personal testimonies as examples of

the power of the new freeze fracture technology Since each chapter also centres around specific biological problem it also serves to illustrate how much the understanding of the problem has been advanced by the new freeze fracture methodology which in most cases is developed by the author s themselves A characteristic of frontier development is that many chapters are dealing with controversial subjects The Inclusion of these subjects in the volume represents the dynamic nature of the subject as viewed by the authors rather than the final verdicts of the subject matter
