Biochemistry And Physiology Of The Neutrophil:

The Neutrophil: Cellular Biochemistry and Physiology Maurice B. Hallett, 2018-01-18 A synthesis and collation of the recent material regarding the role of the neutrophil in basic pathological processes is presented in this volume The mechanisms of chemotaxis secretion phagocytosis intracellular killing oxygen radical production and arachidonate production are comprehensively reviewed Stimulus response coupling in the neutrophil with chapters on intracellular Ca²⁺ C Kinase phospholipid metabolism microfilaments and membrane electrophysiology are extensively discussed Each chapter provides a critical review by experts with over 1 000 cited references Invaluable to graduate students and medical and scientific researchers this book provides a unique up to date account of cellular biochemistry and physiology of the neutrophil

Biochemistry and Physiology of the Neutrophil Steven W. Edwards, 1994-03-25 This book describes the role of the neutrophil in infection and inflammation and provides an up to date review of the biochemistry and physiology of this cell highlighting the mechanisms by which they seek out and destroy pathogenic microorganisms The development of these cells during haematopoiesis is described and the mechanisms that lead to the production of reactive oxidants and the intracellular signal transduction systems that lead to the cell s activation are reviewed The book also discusses recent discoveries concerning the role of cytokines in the regulation of neutrophil function together with the importance of the neutrophil as a generator of inflammatory cytokines Finally there is a description of the biochemical defects that give rise to some of the neutrophil associated human diseases

The Neutrophil Maurice B. Hallett, 1989-01-31 A synthesis and collation of the recent material regarding the role of the neutrophil in basic pathological processes is presented in this volume The mechanisms of chemotaxis secretion phagocytosis intracellular killing oxygen radical production and arachidonate production are comprehensively reviewed Stimulus response coupling in the neutrophil with chapters on intracellular Ca²⁺ C Kinase phospholipid metabolism microfilaments and membrane electrophysiology are extensively discussed Each chapter provides a critical review by experts with over 1 000 cited references Invaluable to graduate students and medical and scientific researchers this book provides a unique up to date account of cellular biochemistry and physiology of the neutrophil

The Neutrophil Marco A. Cassatella, 2003-01-01 In the past neutrophils were often reduced to their ability to release preformed mediators and kill pathogens The present volume of Chemical Immunology and Allergy however offers a very broad and timely view by highlighting the versatile functions of neutrophils in inflammatory immune and antitumoral responses Leading investigators uncover novel aspects of neutrophils such as their capacity to control gene expression at the transcriptional level or respond to proinflammatory cytokines cytokine receptor chains gc and endogenous anti inflammatory lipid mediators Further points under discussion are neutrophils presenting antigens activating T cells participating in chemokine networking and producing IL 12 and other cytokines during infectious diseases Among the most original findings presented in this publication figure the observations that neutrophils cause increased vascular permeability

during acute inflammation regulate directly the angiogenic process and influence tumor development A final article offers a detailed description of the molecular processes affecting neutrophil cell death and survival Unique in its field this valuable volume is recommended reading not only for immunologists and pathologists but also for cell biologists hematologists and immunobiologists

The Neutrophil: Cellular Biochemistry and Physiology MB Hallett (Ed),1989 Blood Cell Biochemistry Volume 3 J. Robin Harris,2013-11-11 This the third volume of the Blood Cell Biochemistry series follows the pattern established in the two previous volumes by containing up to date specialist reviews of topics of current interest within the field of study defined by the subtitle Thus the topics included can be loosely classified under the broad subtitle Lymphocytes and Granulocytes but this does not indicate the full scope of content scientific interest and emphasis of the present volume The opening chapter by Antonio Bonatti surveys the currently available biochemical immunological and molecular markers of hemopoietic precursor cells This is followed appropriately by a contribution from Arnold S Freedman on the cell surface markers in leukemia and lymphoma In a detailed chapter Annette Schmitt Graff and Giulio Gabbiani discuss the cytoskeletal organization of normal and leukemic lymphocytes and lymphoblasts John C Cambier and his colleagues then present a discussion of the signaling events in T lymphocyte dependent B lymphocyte activation Lymphocyte IgE receptors and IgE binding factors are dealt with by Kwang Myong Kim and his colleagues and the role of granule mediators in lymphocyte mediated cytotoxicity is covered by John Ding E Young and his associates A short contribution from James D Katz deals with the intricacies and difficulties of studies on the complement C3b CR1 receptor and its cytoskeletal interactions in neutrophils Arthur K Sullivan then presents an in depth survey of the membrane biochemistry surrounding the flow of granule organelles in leukocyte differentiation
