Semiotics of the Image Yirong Hu, 2025-06-18 This book provides a groundbreaking exploration of image semiotics. Going far beyond traditional analyses of static visual texts, it includes dynamic imagery, literary iconography, and psychological images, offering a holistic view of how semiotics permeates various forms of media and cultural expression. The book integrates various case studies on Chinese culture, providing scholars outside China a unique lens through which to understand Chinese cultural thinking through semiotics. This approach not only enriches the academic discussion but also enhances cross-cultural understanding. In addition, the book collects and synthesizes significant achievements in semiotics, incorporating traditional visual theory research from the Panofsky and Warburg schools. This synthesis forms a comprehensive semiotics of images, providing an interdisciplinary analytical framework for contemporary media spectacles. The book employs multiple methodologies to dissect the visual image spectacles constructed by modern media signs, culminating in a macro-level understanding of cultural spectacles. Furthermore, it situates the comparison between Chinese and Western civilizations within a broad context of cultural philosophy and history, enriching the discourse on cultural differences and similarities.

Spinoza Olli I. Koistinen, John Biro, 2002-01-03 Spinoza's philosophy has an undeserved reputation for being obscure and incomprehensible. But now in this indispensable collection, Spinoza is portrayed in the manner he deserves as a brilliant metaphysician who paved the way for an exciting new science. The volume focuses on several important areas, including monism, the concept of conatus, the nature of and the relation between mind and body, and Spinoza's relationship to Descartes and Leibniz. The new physics posed difficult questions about the existence and power of God; however, it was commonplace of seventeenth-century metaphysics to claim that all force was God's. In his philosophy, Spinoza solves this problem by identifying God with nature. But what happens to individuals after that identification? And what is an individual for Spinoza? How does it act? How are its actions explained? This volume clearly addresses these and other fascinating questions. It explores Spinoza's account of the relationship between mind and body along with his view on the ontology of values. Spinoza saw the threat of deterministic physics to mind-body interaction. How is it possible that minds act on bodies and vice versa? Furthermore, the volume examines the problem of the nature of values, asking: is there room for an independent realm of values in the new philosophy? Finally, the collection investigates problems in the interpretation of Spinoza that stem from Spinoza's debatable place in seventeenth-century philosophy; it is often claimed that Spinoza's ideas evolved from Cartesian doctrines while profoundly influencing Leibniz. With a stellar group of contributors including Michael Della Rocca, John Carriero, Richard Mason, Steven Barbone, Don Garrett, Olli Koistinen, Richard Manning, Peter Dalton, Charles Jarrett, Charles Huenemann, and Mark Kulstad, this volume serves as an excellent resource and represents the best work of a new generation of Spinoza scholars.
