Development in Coastal Zones and Disaster Management Amita Singh, R. Lalitha S. Fernando, Nivedita P. Haran, 2020-10-13 In the last two decades coastal regions have relatively endured some of the fiercest oceanic and geophysical disasters than the earlier decades Yet disaster management governance fails to match the human

nonhuman and environmental calamity which is unfolding in its most frequent and unpredictable pattern Between the Asian Tsunami of 2004 to the devastating Chennai and Kerala floods of 2018 the socio industrial livelihood impact alerts governments towards a greater and more serious compliance to laws for coastal conservation The United Nations Office for Disaster Risk Reduction UNDRR in 2018 had shocking statistics to share as the deaths and damages related to only Tsunami disaster at the coasts to 251 770 and US 280 billions respectively in the last 20 years 1998 2017 as compared to 998 and US 2 7 billion in the previous 20 years 1978 1997 Coastal conservation is no more a question of casual governance but has become a need for survival The region of South Asia which ranks much higher in its vulnerability weak resilience and relatively undersupplied governance structures ought to take this responsibility on a priority The spirit of Hyogu Declaration and the Sendai Framework for Action suggests preparedness and resilience building as key approach areas in coastal governance The book is incomparable in its holistic and transdisciplinary social science based approach to disaster management which links conservation of marine flora and fauna ecosystems and land management with decision making processes and coastal regulations These grass root findings from the subcontinent are substantiated by a section on the most powerful court battle on the Kerala Floods as a guideline for readers to discerningly identify an Act of God often used as a veil to hide lack of preparedness apathy and political greed This book becomes indispensable reading for anyone involved in research administration or any level of decision making for the mitigation and prevention of disasters The Canadian

Bank,2021-10-09 This open access book examines global plastic pollution an issue that has become a critical societal challenge with implications for environmental and public health This volume provides a comprehensive holistic analysis on the plastic cycle and its subsequent effects on biota food security and human exposure Importantly global environmental change and its associated systems level processes including atmospheric deposition ecosystem complexity UV exposure wind patterns water stratification ocean circulation etc are all important direct and indirect factors governing the fate transport and biotic and abiotic processing of plastic particles across ecosystem types Furthermore the distribution of plastic in the ocean is not independent of terrestrial ecosystem dynamics since much of the plastic in marine ecosystems originates from land and should therefore be evaluated in the context of the larger plastic cycle Changes in species size distribution habitat and food web complexity due to global environmental change will likely alter trophic transfer dynamics and the ecological effects of nano and microplastics The fate and transport dynamics of plastic particles are influenced by their size form shape polymer type additives and overall ecosystem conditions In addition to the risks that plastics pose to the total environment the potential impacts on human health and exposure routes including seafood consumption and air and drinking water need to be assessed in a comprehensive and quantitative manner Here I present a holistic and interdisciplinary book volume designed to advance the understanding of plastic cycling in the environment with an emphasis
