Dandago, 2009-01-30 Accounting is the discipline with the oldest historical culture being the first to be recognized by humanity when Adam and Eve were made to account for what they did in paradise It is also the only discipline that will come into play in the Hereafter where everybody would be raised up as an accountant to account for all they have done during their life time on earth Accounting is a service providing discipline with a rich theoretical background which makes available information especially financial to guide various decision making processes Business owners creditors managers prospective investors government and its agencies employees and even the general public seek accounting information to guide them when taking various informed decisions about reporting entities and the environment within which they operate This book addresses the historical accounting culture its theories as well as its practices It is made up of fifteen chapters covering various historical theoretical and practical aspects of Accounting ranging from accounting standardization to financial reporting The book is an attempt to address some of the lacunae in advanced accounting issues both in theory and in practice Students of advanced accounting theory and practice at the professional and academic levels in Universities Polytechnics and Professional Institutes would find the book an essential companion EBOOK: Financial Accounting Theory: European Edition DEEGAN, CRAIG, 2011-01-16 The second edition of

Craig Deegan and Jeffrey Unerman's market leading text presents the various theories of financial accounting through a balanced and dynamic approach. Students are given all the tools to engage with these theories and are encouraged to critically evaluate and challenge them. Clearly written and user friendly, this new edition provides comprehensive coverage of internationally developed accounting theories from a European perspective. *Financial Accounting Theory* Craig Deegan, 2022-10-12. Craig Deegan's *Financial Accounting Theory* provides a concise approach while comprehensively covering both traditional and contemporary theories that have emerged as the practice of accounting has evolved. Social and environmental accountability and reporting issues are discussed in depth along with coverage of critical perspectives, public sector accounting and fair value. Instructors and students value *Financial Accounting Theory* for its reader friendly style using straightforward explanations and numerous practical examples. This new edition continues to follow this approach with the addition of NEW content focusing on how different perspectives of organisational responsibilities and accountabilities impact the way accounting is performed and the theories that different researchers choose to use apply. *Research Handbook on Accounting and Ethics* Marion Brivot, Charles H. Cho, 2023-03-02. This invigorating *Research Handbook* focuses on collective ethical issues facing the accounting profession as a whole as well as the users of the services provided by accountants. Providing an overview of contemporary accounting and ethics issues around the world, it discusses the ethical considerations involved in accounting including external and internal auditing, tax, forensic accounting and governance as well as new areas of research relating to accounting and ethics through cross fertilization with other disciplines and presenting multiple innovative perspectives. **Accounting For Crises: A Marxist History Of American Accounting Theory, C.1929-2007** Rob Bryer, 2023-07-07. Historians have not convincingly explained modern capitalism's two major economic crises: the Great Depression of the 1930s and the Global Financial Crisis (GFC) of 2008-2009. *Accounting for Crises* offers a new explanation why both began and were more severe in the USA. America based on an accounting interpretation of Marx's theory of crises. It explains their origins in capitalists' control of accumulation which reveals important overlooked roles for Irving Fisher's accounting theory. This theory by allowing discretion in accounts in the context of falling rates of profit encouraged swindling, overstating reported profits and understating their risk which facilitated and aggravated both crises. Framed by Fisher's theory during the 1920s, American accounting theorists justified discretion which created the Big Mess. The companion volume concluded it was management used to conservatively smooth earnings. *Accounting for Crises* shows that Fisher's theory also underlays the popular new theory of investment that justified valuing shares using reported earnings which encouraged their manipulation and legitimized speculation. This it argues underlays America's exceptional late 1920s stock market boom, the 1929 Great Crash and the depth and length of its Great Depression. Prominently associated with the boom, Fisher became unpopular after the crash, his name disappearing from public debate. Nevertheless, the book concludes his theory hindered economic recovery, weakened 1930s reforms, undermined accounting regulation from the late

1930s and following his rehabilitation from the late 1950s underlies the Financial Accounting Standards Board's conceptual framework which by allowing off balance sheet accounting for securitization SPEs fostered the 2007 credit crunch that triggered the 2008-2009 Global Financial Crisis GFC A Postmodern Accounting Theory Gaétan Breton, 2018-11-30

Drawing upon frameworks employed in the human sciences Breton builds a multi-faceted theory of accounting conceiving it as a fundamentally social activity that puts preparers of financial statements in contact with users in order to help them make economic decisions and analyzing the behavior of preparers and users
