Axiomatic Stable Homotopy Theory:

Axiomatic Stable Homotopy Theory Mark Hovey, John Harold Palmieri, Neil P. Strickland, 1997 We define and investigate a class of categories with formal properties similar to those of the homotopy category of spectra This class includes suitable versions of the derived category of modules over a commutative ring or of comodules over a commutative Hopf algebra and is closed under Bousfield localization We study various notions of smallness questions about representability of co homology functors and various kinds of localization We prove theorems analogous to those of Hopkins and Smith about detection of nilpotence and classification of thick subcategories We define the class of Noetherian stable homotopy categories and investigate their special properties Finally we prove that a number of categories occurring in nature including those mentioned above satisfy our axioms

Axiomatic Stable Homotopy Theory Paperback Mark Hovey, 2014-09-11 This work gives an axiomatic presentation of stable homotopy theory It starts with axioms defining a stable homotopy category using these axioms one can make various constructions cellular towers Bousfield localization and Brown representability to name a few Much of the book is devoted to these constructions and to the study of the global structure of stable homotopy categories

Axiomatic, Enriched and Motivic Homotopy Theory John Greenlees, 2012-12-06 The NATO Advanced Study Institute Axiomatic enriched and motivic homotopy theory took place at the Isaac Newton Institute of Mathematical Sciences Cambridge England during 9-20 September 2002 The Directors were J P C Greenlees and I Zhukov the other organizers were P G Goerss F Morel J F Jardine and V P Snaith The title describes the content well and both the event and the contents of the present volume reflect recent remarkable successes in model categories structured ring spectra and homotopy theory of algebraic geometry The ASI took the form of a series of 15 minicourses and a few extra lectures and was designed to provide background and to bring the participants up to date with developments The present volume is based on a number of the lectures given during the workshop The ASI was the opening workshop of the four month programme New Contexts for Stable Homotopy Theory which explored several themes in greater depth I am grateful to the Isaac Newton Institute for providing such an ideal venue the NATO Science Committee for their funding and to all the speakers at the conference whether or not they were able to contribute to the present volume All contributions were refereed and I thank the authors and referees for their efforts to fit in with the tight schedule Finally I would like to thank my coorganizers and all the staff at the Institute for making the ASI run so smoothly J P C GREENLEES

Cohomological Methods in Homotopy Theory

Jaume Aguade, Carles Broto, Carles Casacuberta, 2012-12-06 This book contains a collection of articles summarizing the state of knowledge in a large portion of modern homotopy theory A call for articles was made on the occasion of an emphasis semester organized by the Centre de Recerca Matemàtica in Bellaterra Barcelona in 1998 The main topics treated in the book include abstract features of stable and unstable homotopy homotopical localizations p compact groups H spaces classifying spaces for proper actions cohomology of discrete groups K theory and other generalized cohomology theories configuration

spaces and Lusternik Schnirelmann category The book is addressed to all mathematicians interested in homotopy theory and in geometric aspects of group theory New research directions in topology are highlighted Moreover this informative and educational book serves as a welcome reference for many new results and recent methods

Stable Homotopy over the Steenrod Algebra John Harold Palmieri, 2001 This title applies the tools of stable homotopy theory to the study of modules over the mod p Steenrod algebra A DEGREES More precisely let A be the dual of A DEGREES then we study the category $\text{mathsf{stable } A}$ of unbounded cochain complexes of injective comodules over A in which the morphisms are cochain

homotopy classes of maps This category is triangulated Indeed it is a stable homotopy category so we can use Brown representability Bousfield localization Brown Comenetz duality and other homotopy theoretic tools to study it One focus of attention is the analogue of the stable homotopy groups of spheres which in this setting is the cohomology of $\text{mathrm{Ext}}_{A \text{ DEGREES } \text{mathbf{F}}_p} \text{mathbf{F}}_p$ This title also has nilpotence theorems periodicity theorems a convergent chromatic tower and a nu

Stable Homotopy Around the Arf-Kervaire Invariant Victor P. Snaith, 2009-03-28 Were I to take an iron gun And re it o towards the sun I grant twould reach its mark at last But not till many years had passed But should that bullet change its force And to the planets take its course Twould never reach the nearest star Because it is so very far

from FACTS by Lewis Carroll 55 Let me begin by describing the two purposes which prompted me to write this monograph This is a book about algebraic topology and more especially about homotopy theory Since the inception of algebraic topology

217 the study of homotopy classes of continuous maps between spheres has enjoyed a very exc n n tional central role As is well known for homotopy classes of maps $f: S^n \rightarrow S^n$ with $n \geq 1$ the sole homotopy invariant is the degree which characterises the homotopy class completely The search for a continuous map between spheres of different dimensions and not homotopic to the constant map had to wait for its resolution until the remarkable paper of Heinz Hopf 111 In retrospect nding 3 an example was rather easy because there is a canonical quotient map from S^3 to $S^1 \times S^2$ the orbit space of the free circle action $S^1 \times S^3 \rightarrow S^1 \times S^2$

Introduction to Stable Homotopy Theory David Barnes, Constanze Roitzheim, 2020-03-26 A comprehensive introduction to stable homotopy theory for beginning graduate students from motivating phenomena to current research

Parametrized Homotopy Theory J. Peter May, Johann Sigurdsson, 2006 This book develops rigorous foundations for parametrized homotopy theory which is the algebraic topology of spaces and spectra that are continuously parametrized by the points of a base space It also begins the systematic study of parametrized homology and cohomology theories The parametrized world provides the natural home for many classical notions and results such as orientation theory the Thom isomorphism Atiyah and Poincare duality transfer maps the Adams and Wirthmuller isomorphisms and the Serre and Eilenberg Moore spectral sequences But in addition to providing a clearer conceptual outlook on these classical notions it also provides powerful methods to study new phenomena such as twisted K theory and to make new constructions such as iterated Thom spectra Duality theory in the parametrized setting is particularly illuminating and comes in two flavors One

allows the construction and analysis of transfer maps and a quite different one relates parametrized homology to parametrized cohomology The latter is based formally on a new theory of duality in symmetric bicategories that is of considerable independent interest The text brings together many recent developments in homotopy theory It provides a highly structured theory of parametrized spectra and it extends parametrized homotopy theory to the equivariant setting The theory of topological model categories is given a more thorough treatment than is available in the literature This is used together with an interesting blend of classical methods to resolve basic foundational problems that have no nonparametrized counterparts

From Categories to Homotopy Theory Birgit Richter, 2020-04-16 Category theory provides structure for the mathematical world and is seen everywhere in modern mathematics With this book the author bridges the gap between pure category theory and its numerous applications in homotopy theory providing the necessary background information to make the subject accessible to graduate students or researchers with a background in algebraic topology and algebra The reader is first introduced to category theory starting with basic definitions and concepts before progressing to more advanced themes Concrete examples and exercises illustrate the topics ranging from colimits to constructions such as the Day convolution product Part II covers important applications of category theory giving a thorough introduction to simplicial objects including an account of quasi categories and Segal sets Diagram categories play a central role throughout the book giving rise to models of iterated loop spaces and feature prominently in functor homology and homology of small categories
