Atherosclerotic Plaques Robert W. Wissler, M. Gene Bond, Michele Mercuri, Piero Tanganelli, Giorgio Weber, 2013-03-09 The philosophy of this NATO Advanced Research Workshop and the monograph it has yielded is that if you put a small number of very talented and creative scientists of different backgrounds and documented accomplishments together in a cloistered place for a few days to consider a very important and timely topic many new ideas will be generated The keynote of this conference was the Future By this we mean the expected future developments of highly reliable sequential quantitative measurements of atherosclerotic plaque size and components in living human subjects Some of the best minds and the most experienced and talented individuals at the leading edges of imaging of arteries were involved some of the best scientists and students of the atherosclerotic plaque and its components participated and some of the leading investigators of the cell biology or as we call it in the USA the pathobiology of atherosclerosis contributed important new information All of these individuals were actively involved in the conference and each obviously had carefully prepared and was able to communicate effectively **Current Developments in Atherosclerosis Research** Misra Schoenhagen, 2005

Atherosclerosis is a degenerative condition in which arteries build up deposits called plaques atheromas which consist of lipids mainly cholesterol connective tissue and smooth muscle cells originating from the arterial wall Plaques develop quietly over a period of years and are unnoticeable until there is an interruption in the normal flow of blood Plaques may partially or totally block the blood's flow through an artery Two things that can happen where plaques occur are bleeding haemorrhage into the plaque and formation of a blood clot thrombus on the plaque's surface Atherosclerosis affects large and medium sized arteries The type of artery and where the plaque develops varies with each person Atherosclerosis research has witnessed startling progress in recent years partially due to new drugs as well as to new breakthroughs in molecular medicine Trends in Atherosclerosis Research Leon V. Clark, 2004 Atherosclerosis is a degenerative condition in which arteries build up deposits called plaques atheromas which consist of lipids mainly cholesterol connective tissue and smooth muscle cells originating from the arterial wall Plaques develop quietly over a period of years and are unnoticeable until there is an interruption in the normal flow of blood Plaques may partially or totally block the blood's flow through an artery Two things that can happen where plaques occur are bleeding hemorrhage into the plaque and formation of a blood clot thrombus on the plaque's surface Atherosclerosis affects large and medium sized arteries The type of artery and where the plaque develops varies with each person Atherosclerosis research has witnessed startling progress in recent years partially due to new drugs as well as to new breakthroughs in molecular medicine *Current Catalog* National Library of Medicine (U.S.), 1993 First multi year cumulation covers six years 1965 70 *Mechanisms in Fibre Carcinogenesis* Robert C. Brown, John A. Hoskins, Neil F. Johnson, 2012-12-06 The Editors are sorry that the production of this volume was delayed by the ill health of one of them and we hope that this does not detract from the value of the contents For once this delay is not

the fault of any of the authors only the editors are to blame Many of the workers in the field of fibre toxicology became convinced by the middle 1980 s that the worst of the furore over asbestos was over although we were left with an intriguing problem how does asbestos cause disease It was expected that the future impact of fibres on human health would be very small since asbestos exposure would be controlled and there was little chance that man made fibres would prove hazardous These man made fibres are much thicker than asbestos and in most cases they are less durable in the body Both of these properties are believed to make them much less likely to cause disease However many of us had fallen into the habit of calling these materials asbestos substitutes and thus they have acquired a little of the notoriety attached to the natural fibrous minerals Very few of these man made fibres are actually used as replacements for asbestos Asbestos was not suitable for the uses to which the insulation wools are usually put and the ceramic fibres are replacements for fire brick not asbestos which is destroyed at the temperatures at which these materials are used

New Trends in Pharmacokinetics Aldo Rescigno, Ajit K. Thakur, 2012-12-06 The last decade or so has witnessed tremendous progress in methodology in the field of drug development in general and pharmacokinetics in particular Clinical pharmacokinetics is using new tools for probing into the black box once being accessible only partly through experimental techniques and mostly through mathematical and computer means Development of computerized scanning positron emission tomography PET stereoselectivity and other techniques are now enabling investigators to have better pictures of the systems they are studying Mathematical models through computer simulation and statistical estimation mostly due to easy access because of inexpensive yet powerful personal computers are enabling us to investigate ultrastructures and their functional connectivity in more detail As a consequence new hypotheses are being formed and tested in various related fields In clinical pharmacokinetics mostly due to mathematical modeling more accurate interspecies scaling of pharmacokinetic parameters and dosimetry can be done nowadays The concept of a human is a bigger rat does not necessarily fly as a consequence Pharmacokinetic concepts are becoming powerful tools in meaningful carcinogenic and toxic risk extrapolation of different chemicals in humans New dose delivery designs are being formulated using pharmacokinetic techniques for different pharmaceutical compounds Investigations continue in the academia research institutions pharmaceutical biotechnological and agricultural industries in developmental and physiological aspects of different chemicals for the benefit of mankind The idea of a school on New Trends in Pharmacokinetics from which the present publication was made possible took shape over almost a year

Computational Aspects of the Study of Biological Macromolecules by Nuclear Magnetic Resonance Spectroscopy Jeffrey C. Hoch, 2013-11-21 This volume is the scientific chronicle of the NATO Advanced Research Workshop on Computational Aspects of the Study of Biological Macromolecules by Nuclear Magnetic Resonance Spectroscopy which was held June 3-8 1990 at Il Ciocco near Barga Italy The use of computers in the study of biological macromolecules by NMR spectroscopy is ubiquitous The applications are diverse including data collection reduction and analysis Furthermore their use is rapidly

evolving driven by the development of new experimental methods in NMR and molecular biology and by phenomenal increases in computational performance available at reasonable cost. Computers no longer merely facilitate but are now absolutely essential in the study of biological macromolecules by NMR due to the size and complexity of the data sets that are obtained from modern experiments. The Workshop and this proceedings volume provide a snapshot of the uses of computers in the NMR of biomolecules. While by no means exhaustive, the picture that emerges illustrates both the importance and the diversity of their application.

Developmental Neuropathology of Schizophrenia Sarnoff A. Mednick, Tyrone D. Cannon, Christopher E. Barr, Jose M. LaFosse, 2012-12-06. This volume reports the proceedings of a NATO Advanced Workshop held in Castelvechio Pascoli, Italy, from August 28 to September 1, 1989. An important inspiration for this Workshop came from our studies in Helsinki and Denmark which have found that exposure to an influenza epidemic during the second trimester of fetal development increases the risk of adult schizophrenia. This finding has stimulated an important new hypothesis in the study of the etiology of schizophrenia. It has suggested the possibility that disturbances of brain development during gestation may contribute to the risk of adult schizophrenia. We determined that it would be of value to bring together schizophrenia researchers and those doing basic studies of the development of the brain. Both groups of researchers were encouraged to communicate at a level that would help other scientists to integrate their knowledge and techniques into their own discipline. For this reason, perhaps, the papers of this volume are remarkably clear and not difficult to understand. The first four chapters describe the neurochemical and structural aspects of brain development. The chapter by Dziegielewska and Saunders discusses transport mechanisms and the properties of endogenous and exogenous substances that control the internal environment of the developing brain. In the second chapter, Nowakowski reports on his studies of the development of the hippocampus in mice genetically inbred to exhibit disruptions of neural migration.

National Library of Medicine Current Catalog National Library of Medicine (U.S.), 1993. *The Superfamily of ras-Related Genes* Demetrios A. Spandidos, 2013-03-08. Since the earliest results on the linkage between ras activation and cell transformation appeared, a vast amount of additional information has been generated which emphasizes the importance of ras-related genes in membrane trafficking, cell proliferation, differentiation, and cancer. These advances led to the development of new strategies for the diagnosis, prognosis, and prevention of cancer. Ras-related genes appear to be central to the mechanism of transformation by other oncogenes and therefore constitute a focal point upon which attempts to intervene in the process of carcinogenesis will be concentrated. The present volume contains the contributions to the NATO Advanced Research Workshop on the Superfamily of ras-Related Genes held in Agia Pelagia, Heraklion, Crete, Greece, May 1991. At this meeting, the leading researchers in this field came together to discuss the most recent progress in analysis of biological function of the ras-related genes. As an organizer, I feel that the Workshop was a success and would like to thank all the participants and the contributors to this volume. I thank the NATO Scientific Affairs Division, Brussels, the Greek Ministry of
