## **Astrophysical Jets:**

*Astrophysical Jets and Beams* Michael D. Smith, 2012-02-16 An up to date study of astrophysical jets that will appeal to students and researchers in all areas of astrophysics

**Virtual Astrophysical Jets** Silvano Massaglia, Gianluigi Bodo, P. Rossi, 2004-12-09 These proceedings are the result of a three day meeting held in Oogliani Italy on October 2 4 2003 whose title was Virtual Astrophysical Jets 2003 Our goal in convening this meeting was to gather some of the scientists among the most active in the field of numerical simulations and modelling of astrophysical jets For keeping the participants close to the real world we also invited a few observers to give up to date reviews outlining the state of the art of jet observations The principal aim of the meeting was thus to present and critically discuss the state of the art numerical simulations analytical models and laboratory experiments for reproducing the main aspects of astrophysical jets and comparing them with observations The discussion has been focused on the following topics Observations and interpretations of jets from young stars and AGNs comparisons of models with observations MHO accelerations of jets steady self similar models MHO numerical simulations of time dependent accelerations mechanisms Jet stability and interaction with the ambient formation of knots in YSO jets jet survival to instabilities deceleration of relativistic jets in FRI sources simulations of jets IGM interactions jets propagation and galaxy formation Numerical codes and their validation relativistic MHO codes comparisons among different numerical schemes jets in the laboratory and code validation These topics have been discussed intensively during the meeting and the outcome of these discussions is presented in this volume The contributions have been divided in five sections

**Astrophysical Jets** D. Burgarella, M. Livio, C. P. O'Dea, 1993-11-11 A collection of edited review articles presented at a workshop at the Space Telescope Science Institute which gathered astrophysicists from the fields of extragalactic and galactic stellar jets

Astrophysical Jets and Their Engines Wolfgang Kundt, 1987-07-31 This volume is the documentation of the first Course on Neutron Stars Active Galactic Nuclei and Jets of an Erice School with a wide astrophysical scope The choice of the subject was made because of an apparent similarity stressed already at earlier meetings of four classes of astrophysical jet sources Active Galactic Nuclei Young Stellar Objects Binary Neutron Stars and Binary White Dwarfs They share important properties such as their morphology high variability and large velocity gradients as well as with some inference their broad spectrum hypersonic outflow and core lobe power ratio Despite this apparent similarity of the four source classes quite different models have been put forward for their description i The central engine of active galactic nuclei has been generally thought to be a black hole in contrast to the central engine of young stellar objects and cometary nebulae which apparently is a pre T Tauri star some six orders of magnitude less compact and to the central engine of planetary nebulae which mayor may not be a binary white dwarf ii The elongated lobes or flow patterns have been often interpreted as highly directional stellar wind outflows whereas in a few well mapped cases the elongated flow appears to be pumped up through a much narrower channel or jet both in the extragalactic and stellar sources

**Astrophysical Jets** A. Ferrari, A. Pacholczyk, 2012-12-06 Attilio Ferrari I want to recall here the basic points I raised at the beginning of the Workshop as the main targets of discussion in the name of the Scientific Committee I attempted to focus the attention of participants on the fact that in many instances we tend to discuss jets in terms of simple physics more or less as one did at the time extragalactic radio sources were discovered for instance we still use equipartition arguments However we must realize that processes in jets leading to their morphologies and energetics clearly depend on complex plasma phenomena Therefore the same standard arguments used to derive characteristic parameters should be questioned some of the speakers were invited to attempt a critical analysis of this point and in fact I believe that this inquisitive attitude was actually present all along the Workshop Observers were asked to choose the parameters to be used in a statistical sample of jets For this they were urged first of all to distinguish between primary and secondary features For instance are knots and wiggles common to all jets Are relativistic flow velocities expected in all active nuclei Are jets denser or lighter than the external medium On the theoretical side I asked to discuss whether or not existing models are in accordance with the limited statistical sample that we have today And which should be the lines of development to be pursued first and to what extent

Beams and Jets in Astrophysics Philip A. Hughes, 1991-01-25 This book is the first to provide students and researchers in the field of astrophysical jets with a comprehensive and up to date account of current research An important feature of the book is that it combines discussions of both extragalactic and Galactic jets There are ten chapters authored by fourteen active researchers each of whom is an expert on their chosen topic and the book has been edited to provide a cohesive account of this field of study This is the first volume to integrate studies of jets on all length scales It will be an important textbook for graduate students and a valuable reference source for researchers in many areas of extragalactic and Galactic astronomy It will also be of interest to plasma physicists and space scientists

Jets from Young Stars IV Paulo Jorge Valente Garcia, Joao Miguel Ferreira, 2009-11-09 Astronomical jets are key astrophysical phenomena observed in gamma ray bursts active galactic nuclei or young stars Research on them has largely occurred within the domains of astronomical observations astrophysical modeling and numerical simulations but the recent advent of high energy density facilities has added experimental control to jet studies Front line research on jet launching and collimation requires a highly interdisciplinary approach and an elevated level of sophistication Bridging the gaps between pure magnetohydrodynamics thermo chemical evolution high angular resolution spectro imaging and laboratory experiments is no small matter This volume strives to bridge those very gaps It offers a series of lectures which taken as whole act as a thorough reference for the foundations of this discipline These lectures address the following laboratory jets physics from laser and z pinch plasma experiments the magnetohydrodynamic theory of relativistic and non relativistic stationary jets heating mechanisms in magnetohydrodynamic jets from the solar magnetic reconnection to the molecular shock heating perspectives atomic and

molecular microphysics of jet shocked material In addition to the lectures the book offers in closing a presentation of a series of observational diagnostics thus allowing for the recovery of basic physical quantities from jet emission lines *Stellar Jets and Bipolar Outflows* L. Errico,Alberto A. Vittone,2012-12-06 In the last few years great improvements in the study of stellar jets and bipolar outflows have been achieved both observationally and theoretically High resolution observations at various frequencies radio IR optical and X ray of these features in different types of objects have shown a large variety of morphologies at all scales often revealing contrasting symmetries which do not allow straightforward kinematic interpretations valid for all cases In particular at present it seems very difficult to give a statistical definition of what the standard properties of jets and bipolar outflows are On the theoretical side the identification of physical processes capable of producing the observed rich morphological variety of jets and bipolar outflows and supporting them over long lifetimes is still controversial Furthermore several models are actively discussed in an attempt of reaching a complete understanding of the phenomenon The workshop provided an unique opportunity for both observers and theoreticians to gather together and produce an updated and exhaustive picture of the field In addition the meeting has been enriched by the presentation of some works on jets in external galaxies This topic was focused on what people working on stellar jets could learn from colleagues working on extragalactic jets and vice versa Invited papers were prepared with the aim of giving the state of the art about scientific subjects contributed papers and some selected poster papers presented on the contrary very recent results in the various fields **Virtual astrophysical jets** ,2004
