Atherosclerosis Reviews Volume 4:

Behavioral Aspects of Cardiovascular Disease Alvin P. Shapiro, Andrew S. Baum,, Andrew S. Baum, 2014-05-12

Smoking diet stress coping and exercise among other behaviors and psychological states are now clearly implicated in the development of cardiovascular diseases Prevention based largely on altering behaviors that contribute to this chronic disease is now as important a goal as is treatment of those already afflicted This volume based on a recent meeting of the Academy of Behavioral Medicine Research addresses several important areas of research in the general area of cardiovascular disease The topics covered reflect on important aspects of this phenomenon such as the long term development of coronary artery disease central nervous system CNS regulation of blood pressure heart rate and sympathetic tone playing a pivotal role in sympathetic activity and hypertension learned blood pressure modulation and baroreceptor activation as a means of reducing the aversiveness of stress or noxious stimulation and the notion that symptoms of heart disease or infarction may occur in the absence of organic heart disease Having been impressed by the recent advances in the field the editors of this book capture the wealth of newly acquired knowledge about behavioral factors in cardiovascular disease and how the body s nervous endocrine and cardiovascular systems work together

Expanding Horizons in Atherosclerosis Research Günter Schlierf, Hubert Mörl, 2012-12-06 On 29 February 1964 a group of European scientists met in Paris to discuss a subject of common interest namely atherosclerosis research with particular reference to international communication and collaboration After a second meeting on 15 May 1964 they founded the European Atherosclerosis Group which was to comprise individuals engaged in the various disciplines of atherosclerosis research in Eastern and Western Europe Since then this group has initiated multidisciplinary discussion and scientific collaboration across Europe in accordance with the objects and aims written in its statutes 1 To hold colloquia and symposia dealing with research in the field of atherosclerosis and allied sciences 2 To encourage meetings and exchanges between scientists in the group engaged in the investigation of atherosclerosis 3 To encourage collaborative work between national and international centers engaged in atherosclerosis research 4 To encourage the publication of reviews etc on atherosclerosis research which may be considered of value 5 To promote research fellowships particularly for younger research workers for studies within the field of atherosclerosis and allied sciences 6 To accept dues endowments grants funds and bequests to be used for the above purposes The European Atherosclerosis Group has helped to bring together what was separated during the second world war and the postwar period in Europe and to reestablish ties with the leading American teams

Vessel Wall in Athero- and Thrombogenesis E.I. Chazov, V.N. Smirnov, 2012-12-06 Mankind in the second half of the twentieth century has encountered a number of social and economic problems which as never before determine its future Among the main problems facing medicine meriting distinction is organization of the struggle against the increase of cardiovascular and oncological diseases which with the birthrate are the main demographic indices of our planet According to the World Health Organization the deathrate from

diseases of the cardiovascular system has risen by 60% in recent years and there has been a sharp increase of myocardial infarctions and cases of sudden death in young people aged 25-30. The geography of heart and blood vessel diseases has changed; a dramatic increase of morbidity has been recorded in rural regions and in districts where 10-20 years ago the native population was practically unaffected by atherosclerosis. Diseases of the cardiovascular system have become widespread among women as well as men. Cardiovascular diseases tax the national economy; they are responsible for over half the mortality among people at the prime of their productive life. More than 50% of temporary disability is also accounted for by ischemic heart disease, hypertension, stroke, etc.

In Search of Coronary-prone Behavior Aron Wolfe

Siegmán, Theodore M. Dembroski, 2013-05-13. *In Search of Coronary Prone Behavior*. Beyond Type A provides a methodology of enormous potential for examining the relationship between behavioral variables and basic pathophysiological mechanisms. They discuss the history of Type A behavior pattern (TABP) as it relates to coronary heart disease (CHD). Students and researchers with an interest in the correlation between personality and coronary behavior as well as behavioral medicine, social and health psychology, and the neurosciences.

The Health Consequences of Smoking for Women United States.

Office on Smoking and Health, 1980. Cardiovascular Disease Linda L. Gallo, 2013-04-17. The Sixth Annual International Spring Symposium on Health Sciences held in Washington D.C. in May 1986 brought together over 650 scientists from 19 countries to review and update research on cardiovascular disease. In this volume, which contains 59 chapters, an internationally recognized group of authors contribute up-to-date accounts of molecular and cellular processes occurring in the vessel wall in atherogenesis and describe approaches to the prevention and treatment of atherosclerosis. The volume is divided into six major sections. Two sections deal with current aspects of lipoprotein metabolism. In Part I, we are alerted to the impact on lipoprotein metabolism of structural heterogeneity within the four broad lipoprotein classes. Attention then turns to the components that orchestrate lipoprotein metabolism. Apolipoprotein identities, processing, and functions are described, as are the roles of lipid transfer proteins in plasma lipoprotein remodeling. Hepatic lipase synthesis and secretion are described. In Part II, Nobel Laureates Michael S. Brown and Joseph L. Goldstein describe mutations in the LDL receptor that reveal the functions of its various domains and point out how understanding the LDL receptor has provided a rational basis for its regulation. A discussion of the role of receptors in regulating cholesterol uptake by tissues follows, with emphasis on receptor-ligand interactions. Additional pathways for cholesterol delivery to cells are explored, as are pathways for cholesterol egress. Coronary Heart Disease in Women, 1987. Genetic factors in coronary heart disease U. Goldbourt, U. de Faire, K. Berg, 2012-12-06. Incidence and mortality of atherosclerosis and coronary heart disease (CHD) vary considerably among races, populations, and ethnic groups. Some individuals with low levels of risk factors succumb early to disease, while many others with a high risk profile do not. CHD clusters in families and is manyfold increased in first-degree relatives of persons with an early onset of the disease. Such studies provide compelling evidence of the high degree of heritability of CHD.

and its risk factors This book consolidates the available evidence for the roles of genetics in atherosclerosis its correlates and its sequelae It presents and discusses the methodology currently used to elucidate the role of genetics Separate parts focus on evidence of familial aggregation and ethnic variability of the disease and on monogenic and polygenic inheritance modes including all the recent findings and innovation The book also contains chapters on the genetic aspects of vessel wall processes such as early structural findings in histological studies and the variability of coronary anatomic patterns Polymorphisms at the DNA level RFLP are detailed and reviewed Directions for future research in the exciting and fast developing realm of genetic epidemiology are outlined and the major preventive and public health implications are discussed Genetic Factors in Coronary Heart Disease provides a systematic review of findings integrated to offer a comprehensive summary and stepping stone for future research It will be of interest to investigators in atherosclerosis genetics epidemiology biostatistics cardiology and public health

Atherogenesis Sampath Parthasarathy, 2012-01-11 This monograph will bring out the state of the art advances in the dynamics of cholesterol transport and will address several important issues that pertain to oxidative stress and inflammation The book is divided into three major sections The book will offer insights into the roles of specific cytokines inflammation and oxidative stress in atherosclerosis and is intended for new researchers who are curious about atherosclerosis as well as for established senior researchers and clinicians who would be interested in novel findings that may link various aspects of the disease

Acute Phase Proteins as Early Non-Specific Biomarkers of Human and Veterinary Diseases Francisco Veas, 2011-10-10 The two volumes of Acute Phase Proteins book consist of chapters that give a large panel of fundamental and applied knowledge on one of the major elements of the inflammatory process during the acute phase response i e the acute phase proteins expression and functions that regulate homeostasis We have organized this book in two volumes the first volume mainly containing chapters on structure biology and functions of APP the second volume discussing different uses of APP as diagnostic tools in human and veterinary medicine
