Brown Of Multimedia:

Interactive Multimedia Learning Environments Max Giardina, 2012-12-06 Multimedia environments suggest to us a new perception of the state of changes in and the integration of new technologies that can increase our ability to process information. Moreover, they are obliging us to change our idea of knowledge. These changes are reflected in the obvious synergetic convergence of different types of access, communication and information exchange. The multimedia learning environment should not represent a passive object that only contains or assembles information but should become on one side the communication medium of the pedagogical intentions of the professor designer and on the other side the place where the learner reflects and where he or she can play with, test and access information and try to interpret it, manipulate it and build new knowledge. The situation created by such a new learning environment that gives new powers to individuals, particularly with regard to accessing and handling diversified dimensions of information, is becoming increasingly prevalent in the field of education. The old static equilibrium in which fixed roles are played by the teacher including the teaching environment and the learner is shifting to dynamic equilibrium where the nature of information and its processing change depending on the situation, the learning context and the individual's needs. Osborn, Douglas Kaufman, 2010-08-27 *Interdisciplinary Education in the Age of Assessment* addresses a prevalent need in educational scholarship today. Many current standards driven curricula follow strict subject specific guidelines leaving educators little room for interdisciplinary innovation. This book gears itself toward developing assessment models specific to interdisciplinary education positioning itself as a seminal volume in the field and a valuable resource to educators across the disciplines. Each chapter covers a major subject area: literacy, science, math, social studies, bilingual education, foreign language, educational policy and discusses methods of assessing integrated interdisciplinary curriculum and instruction. **Handbook of Theory and Practice of Sustainable Development in Higher Education** Walter Leal Filho, Luciana Brandli, Paula Castro, Julie Newman, 2016-11-09 This Handbook approaches sustainable development in higher education from an integrated perspective addressing the dearth of publications on the subject. It offers a unique overview of what universities around the world are doing to implement sustainable development i.e. via curriculum innovation, research activities or practical projects and how their efforts relate to education for sustainable development at the university level. The Handbook gathers a wealth of information, ideas, best practices and lessons learned in the context of executing concrete projects and assesses methodological approaches to integrating the topic of sustainable development in university curricula. Lastly, it documents

and disseminates the veritable treasure trove of practical experience currently available on sustainability in higher education
