Antibody Therapy:

Monoclonal Antibody Therapy of Human Cancer Kenneth A. Foon, Alton C. Morgan, 1985-09-30 KENNETH A FOON and ALTON C MORGAN JR Passive immunotherapy using heteroantisera for the treatment of cancer in animals and humans has been studied for over 50 years Attempts have been made to treat animal tumors with sera from immunized syngeneic allogeneic or xenogeneic animals A number of studies of passive immunotherapy using heterologous antisera in humans have also been performed These studies have generally been attempted in patients with large tumor burdens and as would be expected results have been transient at best A wide variety of solid tumors as well as leukemias and lymphomas have been treated with antisera raised in sheep horses rabbits and goats Problems such as anaphylaxis serum sickness and severe cytopenias have been encountered with these antisera There are a number of potential mechanisms by which unconjugated antibodies might be cytotoxic to tumor cells Antibodies bound to the cell surface membrane of tumor cells may lead to cell lysis by complement dependent or antibody dependent cellular cytotoxicity Circulating tumor cells bound by antibody may be more susceptible to phagocytosis by the reticuloendothelial system Antibody bound to the cell surface membrane of tumor cells may enhance immunogenicity of the tumor cell leading to activation of the host's immune system Biomedical Index to PHS-supported Research: pt. Therapeutic Antibodies John Landon, Tim Chard, 2012-12-06 Several aspects of clinical medicine are poised on the edge of a new era with the introduction of therapeutic antibodies This revolution has been made possible by major advances in immune technology which are now beginning to mature into clinical practice This volume is aimed at all clinicians involved with this form of treatment especially accident and emergency physicians clinical immunologists and pharmacologists It covers both the basic technology and also all the main clinical areas of application septic shock autoimmune disease and cancer The future of therapeutic antibodies is also discussed including exciting new developments in catalytic antibodies This

is the first occasion on which all these topics have been brought together in a single volume thus making it an important reference source for physicians and researchers in this fast moving area *Antibodies* A. Szentivanyi, Paul H.

Maurer, Bernard W. Janicki, 2013-03-07 This publication is based on a Symposium that has been held in Clearwater Florida on February 19 21 1986 on antibodies their structure synthesis function and clinical applicability in disease Organization of this symposium by the University of South Florida College of Medicine was prompted by the unparalleled current expansion of information on these topics in general and in the field of antibody diversity in particular The issues that surround the last named dimension of this field began to surface in the late 1950 s with the first conclusive genetic studies having been answered and a new set of concepts has been defined As we see it from the material presented in this volume now new and different questions are being raised and answered by studies in progress and it may be expected that there will be other questions that will be with us for a considerably longer time We believe that the symposium brought together many prominent investigators with different backgrounds and training experiences such as immunologists microbiologists biochemists molecular biologists and clinical scientists thus providing an excellent example of the interdisciplinary value of modern immunology and modern biomedical science in general We believe therefore that bringing these complex topics to a wide audience of biomedical scientists through this symposium as well as this volume is of value to the scientific and to the medical community **Principles of Cancer Biotherapy** Robert K. Oldham, Robert O. Dillman, 2009-08-29 At the time of

the first edition of Principles of Cancer Biotherapy in 1987 this book represented the first comprehensive textbook on biological therapy In 1991 when the second edition was published there was still some doubt on the part of many oncologists and cancer researchers as to the therapeutic value of these new approaches By 2003 and the fourth edition it was generally agreed that biopharmaceuticals were producing major opportunities for new cancer therapies Cancer biotherapy has now truly matured into the fourth modality of cancer treatment This fifth revised edition describes the tremendous progress that has been made in recent years using biologicals in cancer treatment This book summarizes an evolving science and a rapidly changing medical practice in biotherapy In this new millennium it is now possible to envision a much more diversified system of cancer research and treatment that will afford greater opportunities for a patient's personalized cancer treatment This was first envisioned in the 1987 initial edition of this textbook and is now a new and popular approach to cancer treatment Some forms of cancer biotherapy use the strategy of tumor stabilization and control through continued biological therapy akin to the use of insulin in the treatment of diabetes This textbook illustrates new methods of thinking and new strategies for control of cancer It is always difficult to move from past dogma to future opportunity but this fifth edition of Principles of Cancer Biotherapy illustrates why it is so important to the patients for researchers and clinicians to explore and quickly apply these new opportunities in cancer biotherapy *Effector functions of therapeutic antibodies* Peter Boross, Matthias
