Applied Optics Optical Design 2vol:

Applied Optics and Optical Design Alexander Eugen Conrady, Rudolf Kingslake, 1992-01-01 Classic work presents Conrady's complete system of optical design Part One covers all ordinary ray tracing methods together with the complete theory of primary aberration and as much of higher aberration as is needed for the design of telescopes low power microscopes and simple optical systems *Applied Optics and Optical Design, Part Two* Alexander Eugen Conrady, 1960

Introduction to Modern Optics Grant R. Fowles, 1989-01-01 This incisive text provides a basic undergraduate level course in modern optics for students in physics technology and engineering The first half of the book deals with classical physical optics the second principally with the quantum nature of light Chapters 1 and 2 treat the propagation of light waves including the concepts of phase and group velocities and the vectorial nature of light Chapter 3 applies the concepts of partial coherence and coherence length to the study of interference and Chapter 4 takes up multiple beam interference and includes Fabry Perot interferometry and multilayer film theory Diffraction and holography are the subjects of Chapter 5 and the propagation of light in material media including crystal and nonlinear optics are central to Chapter 6 Chapters 7 and 8 introduce the quantum theory of light and elementary optical spectra and Chapter 9 explores the theory of light amplification and lasers Chapter 10 briefly outlines ray optics in order to introduce students to the matrix method for treating optical systems and to apply the ray matrix to the study of laser resonators Many applications of the laser to the study of optics are integrated throughout the text The author assumes students have had an intermediate course in electricity and magnetism and some advanced mathematics beyond calculus For classroom use a list of problems is included at the end of each chapter with selected answers at the end of the book *Applied Nonlinear Optics* Frits Zernike, John E. Midwinter, 2006-01-01

Directed toward physicists and engineers interested in the device applications enabled by nonlinear optics this text is suitable for advanced undergraduates and graduate students Its content is presented entirely on a classical basis and requires only an elementary knowledge of quantum mechanics The authors demonstrate how real laboratory situations can diverge from ideal theory acquainting readers with the kinds of problems common to construction of a nonlinear device They also offer a detailed discussion of the practical problems and characteristics of nonlinear materials as well as the selection procedures necessary to ensure the use of good material Their treatment begins with an introduction to the theories of linear and nonlinear optics along with the basic ideas behind them Succeeding chapters explore phase matching and nonlinear materials followed by detailed treatments of second harmonic generation parametric up conversion and optical parametric amplification and oscillation Appendixes offer a comprehensive list of materials and their properties the text concludes with references and an index Foundations of Radiation Hydrodynamics Dimitri Mihalas, Barbara Weibel-Mihalas, 1999-07-07

Largely self contained this expert three part treatment focuses on the dynamics of nonradiating fluids explores the physics of radiation radiation transport and the dynamics of radiating fluids and offers a brief appendix that explains the use of tensor

concepts in equations related to the transition of ordinary fluids to relativistic fluids to radiation 1984 edition *Hypersonic Inviscid Flow* Wallace D. Hayes, Ronald F. Probstein, 2012-07-13 Unified self contained view of nonequilibrium effects body geometries and similitudes available in hypersonic flow and thin shock layer appropriate for graduate level courses in hypersonic flow theory 1966 edition **Concepts of Force** Max Jammer, 2012-07-31 This work by a noted physicist traces conceptual development from ancient to modern times Kepler's initiation Newton's definition subsequent reinterpretation contrasting concepts of Leibniz Boscovich Kant with those of Mach Kirchhoff Hertz An excellent presentation Science

Applied Optics and Optical Design , 1929 **Theoretical Nuclear Physics** John Markus Blatt, Victor Frederick Weisskopf, 1991-01-01 A classic work by two leading physicists and scientific educators endures as an uncommonly clear and cogent investigation and correlation of key aspects of theoretical nuclear physics It is probably the most widely adopted book on the subject The authors approach the subject as the theoretical concepts methods and considerations which have been devised in order to interpret the experimental material and to advance our ability to predict and control nuclear phenomena The present volume does not pretend to cover all aspects of theoretical nuclear physics Its coverage is restricted to phenomena involving energies below about 50 Mev a region sometimes called classical nuclear physics Topics include studies of the nucleus nuclear forces nuclear spectroscopy and two three and four body problems as well as explorations of nuclear reactions beta decay and nuclear shell structure The authors have designed the book for the experimental physicist working in nuclear physics or graduate students who have had at least a one term course in quantum mechanics and who know the essential concepts and problems of nuclear physics Magnetism and Metallurgy of Soft Magnetic Materials Chih-Wen Chen, 1986-01-01 Directed to solid state physicists engineers and graduate level students a comprehensive treatment of the theory and application of soft magnets vital in computer and telecommunications technology Topics include ferromagnetism and ferrimagnetism magnetization and domain structure metallurgy and applications of soft magnetic materials 227 figures
