Wired Shut Tarleton Gillespie, 2009-09-18 How the shift toward technical copy protection in the battle over digital copyright depends on changing political and commercial alignments that are profoundly shaping the future of cultural expression in a digital age While the public and the media have been distracted by the story of Napster warnings about the evils of piracy and lawsuits by the recording and film industries the enforcement of copyright law in the digital world has quietly shifted from regulating copying to regulating the design of technology Lawmakers and commercial interests are pursuing what might be called a technical fix instead of specifying what can and cannot be done legally with a copyrighted work this new approach calls for the strategic use of encryption technologies to build standards of copyright directly into digital devices so that some uses are possible and others

rendered impossible In *Wired Shut* Tarleton Gillespie examines this shift to technical copy protection and its profound political economic and cultural implications Gillespie reveals that the real story is not the technological controls themselves but the political economic and cultural arrangements being put in place to make them work He shows that this approach to digital copyright depends on new kinds of alliances among content and technology industries legislators regulators and the courts and is changing the relationship between law and technology in the process The film and music industries he claims are deploying copyright in order to funnel digital culture into increasingly commercial patterns that threaten to undermine the democratic potential of a network society In this broad context Gillespie examines three recent controversies over digital copyright the failed effort to develop copy protection for portable music players with the Strategic Digital Music Initiative SDMI the encryption system used in DVDs and the film industry's legal response to the tools that challenged them and the attempt by the FCC to mandate the broadcast flag copy protection system for digital television In each he argues that whether or not such technical constraints ever succeed the political alignments required will profoundly shape the future of cultural expression in a digital age

Interactive Media for Sustainability Roy Bendor, 2018-08-02 *Interactive Media for Sustainability* presents a conceptually rich critical account of the design and use of interactive technologies to engage the public with sustainability Treating interactive technologies as forms of mediation the book argues that these technologies advance multiple understandings of sustainability At stake are the ways sustainability encodes the complexity of interrelated social and natural systems and how it conveys the malleability of the future The book's argument is anchored in a diverse set of theoretical resources that include contemporary work in human computer interaction HCI social theory media studies and the philosophy of technology and is animated by a variety of examples including interactive simulations persuasive apps digital games art installations and decision support tools

Who's Asking? Douglas L. Medin, Megan Bang, 2014-01-03 Analysis and case studies show that including different orientations toward the natural world makes for more effective scientific practice and science education The answers to scientific questions depend on who's asking because the questions asked and the answers sought reflect the cultural values and orientations of the questioner These values and orientations are most often those of Western science In *Who's Asking* Douglas Medin and Megan Bang argue that despite the widely held view that science is objective value neutral and acultural scientists do not shed their cultures at the laboratory or classroom door their practices reflect their values belief systems and worldviews Medin and Bang argue further that scientist diversity the participation of researchers and educators with different cultural orientations provides new perspectives and leads to more effective science and better science education Medin and Bang compare Native American and European American orientations toward the natural world and apply these findings to science education The European American model they find sees humans as separated from nature the Native American model sees humans as part of a natural ecosystem Medin and Bang then report on the development of ecologically oriented and community based science education programs on the

Menominee reservation in Wisconsin and at the American Indian Center of Chicago Medina and Bang's novel argument for scientist diversity also has important implications for questions of minority underrepresentation in science **One Less Car** Zachary Mooradian Furness, Zack Furness, 2010-03-12 The power of the bicycle to impact mobility technology urban space and everyday life **Routledge Handbook of Gender and Environment** Sherilyn MacGregor, 2017-07-14 The Routledge Handbook of Gender and Environment gathers together state of the art theoretical reflections and empirical research from leading researchers and practitioners working in this transdisciplinary and transnational academic field Over the course of the book these contributors provide critical analyses of the gender dimensions of a wide range of timely and challenging topics from sustainable development and climate change politics to queer ecology and interspecies ethics in the so called Anthropocene Presenting a comprehensive overview of the development of the field from early political critiques of the male domination of women and nature in the 1980s to the sophisticated intersectional and inclusive analyses of the present the volume is divided into four parts Part I Foundations Part II Approaches Part III Politics policy and practice Part IV Futures Comprising chapters written by forty contributors with different perspectives and working in a wide range of research contexts around the world this Handbook will serve as a vital resource for scholars students and practitioners in environmental studies gender studies human geography and the environmental humanities and social sciences more broadly
