Approximation And Complexity In Numerical Optimization Continuous And Discrete Problems:

Approximation and Complexity in Numerical Optimization Panos M. Pardalos, 2013-06-29 There has been much recent progress in approximation algorithms for nonconvex continuous and discrete problems from both a theoretical and a practical perspective In discrete or combinatorial optimization many approaches have been developed recently that link the discrete universe to the continuous universe through geometric analytic and algebraic techniques Such techniques include global optimization formulations semidefinite programming and spectral theory As a result new approximate algorithms have been discovered and many new computational approaches have been developed Similarly for many continuous nonconvex optimization problems new approximate algorithms have been developed based on semidefinite programming and new randomization techniques On the other hand computational complexity originating from the interactions between computer science and numerical optimization is one of the major theories that have revolutionized the approach to solving optimization problems and to analyzing their intrinsic difficulty The main focus of complexity is the study of whether existing algorithms are efficient for the solution of problems and which problems are likely to be tractable The quest for developing efficient algorithms leads also to elegant general approaches for solving optimization problems and reveals surprising connections among problems and their solutions A conference on Approximation and Complexity in Numerical Optimization Continuous and Discrete Problems was held during February 28 to March 2 1999 at the Center for Applied Optimization of the University of Florida

Stochastic and Global Optimization G. Dzemyda,V. Saltenis,A. Žilinskas,2006-04-11 In the paper we propose a model of tax incentives optimization for investment projects with a help of the mechanism of accelerated depreciation Unlike the tax holidays which influence on effective income tax rate accelerated depreciation affects on taxable income In modern economic practice the state actively use for an attraction of investment into the creation of new enterprises such mechanisms as accelerated depreciation and tax holidays The problem under our consideration is the following Assume that the state region is interested in realization of a certain investment project for example the creation of a new enterprise In order to attract a potential investor the state decides to use a mechanism of accelerated tax depreciation The following question arise What is a

reasonable principle for choosing depreciation rate From the state's point of view the future investor's behavior will be rational It means that while looking at economic environment the investor chooses such a moment for investment which maximizes his expected net present value NPV from the given project For this case both criteria and investment rule depend on proposed by the state depreciation policy For the simplicity we will suppose that the purpose of the state for a given project is a maximization of a discounted tax payments into the budget from the enterprise after its creation Of course these payments depend on the moment of investor's entry and therefore on the depreciation policy established by the state

Handbook of Power Systems II Steffen Rebennack, Panos M. Pardalos, Mario V. F. Pereira, Niko A. Iliadis, 2010-08-26 Energy is one of the world's most challenging problems and power systems are an important aspect of energy related issues This handbook contains state of the art contributions on power systems modeling and optimization The book is separated into two volumes with six sections which cover the most important areas of energy systems The first volume covers the topics operations planning and expansion planning while the second volume focuses on transmission and distribution modeling forecasting in energy energy auctions and markets as well as risk management The contributions are authored by recognized specialists in their fields and consist in either state of the art reviews or examinations of state of the art developments The articles are not purely theoretical but instead also discuss specific applications in power systems

Essays and Surveys in Global Optimization Charles Audet, Pierre Hansen, Giles Savard, 2005-12-05 Global optimization aims at solving the most general problems of deterministic mathematical programming to find the global optimum of a nonlinear nonconvex multivariate function of continuous and/or integer variables subject to constraints which may be themselves nonlinear and nonconvex In addition once the solutions are found proof of its optimality is also expected from this methodology Therefore with these difficulties in mind global optimization is becoming an increasingly powerful and important methodology Essays and Surveys in Global Optimization is the most recent examination of its mathematical capability power and wide ranging solutions to many fields in the applied sciences
