Grains Fuji Jian, Digvir S. Jayas, 2021-12-23 Drying and storage are two significant unit operations in the food industry and are applied to both raw and processed products including cereal grains oilseeds legumes flour noodle coffee and cornstarch The common characteristic of these materials is that all of them are hygroscopic and contain water The hygroscopic properties are influenced by their physical properties which are influenced by their storage environments such as bins warehouses bunkers and temporary storage structures This book focuses on the storage and drying of bulk products in these storage structures On many occasions in our work with the grain storage and drying personnel especially our graduate students and industry contacts we found a book explaining the fundamental principles of grain storage and drying is needed Therefore the primary objective of this book is to help readers understand the fundamental principles of grain storage and drying and develop a well informed approach to solve grain storage and drying problems Technologies for grain storage and drying are advanced through research therefore literature review and background on each topic has also been included The book is generally intended for grain storage and drying students engineers and scientists As reflected in the contents which are presented at several levels of depth this book

will serve well readers with different backgrounds and interests An effort has been made to allow for independent reading of different sections and to make a large part of this work accessible to a non mathematical audience The authors have combined their experience of teaching grain storage and drying to undergraduate and graduate students in the faculties of Agricultural and Food Sciences and Engineering Material in the book is organized into broad topic areas physical properties Chapters 1 and 2 grain temperature and moisture Chapters 2 and 6 water in biomaterials and relationship with its environment Chapter 3 fundamental principles of aeration drying and rewetting Chapter 4 and mathematical modelling of isotherm drying and re wetting Chapter 5 We hope our readers will benefit from the contents of the book for many decades

Thermal Food Processing Da-Wen Sun,2005-12-12 The challenge of maintaining both quality and safety in the thermal processing of foods results from the degradation of heat sensitive quality attributes during processing The editor of Thermal Food Processing New Technologies and Quality Issues presents a comprehensive reference through authors that assist in meeting this challenge by explaining Heat and Mass Transfer Modelling During Drying Mohammad U.H. Joardder,Washim Akram,Azharul Karim,2021-09-30 Most conventional dryers use random heating to dry diverse materials without considering their thermal sensitivity and energy requirements for drying Eventually excess energy consumption is necessary to attain a low quality dried product Proper heat and mass transfer modelling prior to designing a drying system for selected food materials can overcome these problems Heat and Mass Transfer Modelling During Drying Empirical to Multiscale Approaches extensively discusses the issue of predicting energy consumption in terms of heat and mass transfer simulation A comprehensive mathematical model can help provide proper insight into the underlying transport phenomena within the materials during drying However drying of porous materials such as food is one of the most complex problems in the engineering field that is also multiscale in nature From the modelling perspective heat and mass transfer phenomena can be predicted using empirical to multiscale modelling However multiscale simulation methods can provide a comprehensive understanding of the physics of drying food materials KEY FEATURES Includes a detailed discussion on material properties that are relevant for drying phenomena Presents an in depth discussion on the underlying physics of drying using conceptual visual content Provides appropriate formulation of mathematical modelling from empirical to multiscale approaches Offers numerical solution approaches to mathematical models Presents possible challenges of different modelling strategies and potential solutions The objective of this book is to discuss the implementation of different modelling techniques ranging from empirical to multiscale in order to understand heat and mass transfer phenomena that take place during drying of porous materials including foods pharmaceutical products paper leather materials and more Transactions on Engineering Technologies Sio-Iong Ao,Haeng-Kon Kim,Mahyar A. Amouzegar,2021-01-04 This book contains a selection of revised and extended research articles written by prominent researchers participating in the 27th World Congress on Engineering and Computer Science WCECS 2019 which was held in San Francisco USA on October 22 24 2019 Topics covered include
