

This book aims at revealing almost step by step the methods for approaching architectural design using Information Technologies to open new fields of investigation. Motivated by this spirit, in

the first part are sections on Polysurfaces, Keyframing, Morphing, Metaballs, Particle Systems and others on interconnected, open and dynamic systems that bring together contemporary science and computers. But for an essential group of architects this new frontier is also a fundamental attempt to make architecture change interactively with changing situations and desires. The second part of this book is aimed precisely at understanding this world, including the "technical" viewpoint, both through a detailed analysis of the realm of sensors and interactive systems as well as by outlining the overall logic of a new environment. An environment half natural and half artificial, created and developed by new forms of media.

Francesco De Luca (1965) is a researcher in the field of the emerging relations between architecture and technological innovations. He studied at the USA Institute of New York and worked at the Architectural Studio in Paris and at the studio of Massimiliano Fuksas in Rome. He teaches Modelling and Virtual Simulation at the laboratory of Computer Graphics at Rome University "La Sapienza".

Marco Nardini (1961) is a lecturer of Industrial Design at the University of Rome "La Sapienza". As a researcher, he studied the applications of informatics and telematics in architecture. He won several prizes in different design and landscape planning competitions. He is also the author of Web sites, CD-Roms, informative systems for didactics and research.

The Information Technology Revolution in Architecture is a new series reflecting on the effects the virtual dimension is having on architects and architecture in general. Each volume will examine a single topic, highlighting the essential aspects and exploring their relevance for the architects of today.

Behind The Scene Avantgarde Techniques In Contemporary Design:

Behind the Scenes Francesco De Luca, Marco Nardini, 2002-09-26 Information technology has brought about a radical change in architectural design The sketches and plans of yesterday have been transformed by CAD In this book the authors cast a glance behind the scenes to provide a systematic overview of the tools and technical processes which are now an integral part of today's design methods The most important digital tools are presented the principal steps are analysed and the essential concepts are explained The theoretical information is vividly illustrated by a selection of examples from the world of architecture A concise and accessible introduction to electronic designing this book makes the subject easily comprehensible to all who are new to the field and for those who already involved in digital designing it is a useful recapitulation and orientation

Decoding Luigi Moretti's Architettura Parametrica Giuseppe Canestrino, 2025-05-16 Decoding Luigi Moretti's *Architettura Parametrica* presents an unprecedented critical discussion of one of the earliest theoretical and practical explorations into the integration of scientific thought mathematical models and digital tools in architectural design Moretti a renowned professional who engaged in countless intellectual initiatives developed and refined his architectural vision long before parametric became synonymous with computational design His *Architettura Parametrica* is an unconventional inquiry of the prospects offered to design practice by digital thinking rather than by digital tools which were still immature or completely absent at the time Moretti proposed a unique and still relevant mental landscape that united his fascination with Baroque spatiality operational research informal art optics cybernetics ethics and much more This research decodes numerous facets of *Architettura Parametrica* from the rigid theoretical precepts to the negotiation with design praxis from the use of equations to aid the research of forms to the speculation on the meaning of architecture through abstract mathematics This book offers novel perspectives to scholars interested in the interplay between architectural design practice and theory mathematics and design methods digital and architectural culture and to the growing number of practitioners who are crafting personal narratives within the most disruptive computational techniques

Architecture and Adaptation Socrates Yiannoudes, 2016-01-29 Architecture and Adaptation discusses architectural projects that use computational technology to adapt to changing conditions and human needs Topics include kinetic and transformable structures digitally driven building parts interactive installations intelligent environments early precedents and their historical context socio cultural aspects of adaptive architecture the history and theory of artificial life the theory of human computer interaction tangible computing and the social studies of technology Author Socrates Yiannoudes proposes tools and frameworks for researchers to evaluate examples and tendencies in adaptive architecture Illustrated with more than 50 black and white images

The IT Revolution in Architecture. Thoughts on a Paradigm Shift Antonino Saggio, 2008-11-29 Information Technology is imposing itself as the central paradigm for a new phase in all of architecture the dynamic interconnections at the heart of IT are being transferred from the world of digital models to the reality of a

reactive sensitive interactive architecture The structure chosen for this book was to avoid a crib sheet on the IT Revolution in Architecture The formula of the treatise was just as impossible to use not only because many aspects of contemporary scientific research are oriented toward a structure that remains intentionally open and serves to launch new hypotheses rather than solidify certainties but also because this aspect is reinforced by the material that by its nature finds itself in an free interconnected intrinsically problematic dimension *The Architecture Annual 2004-2005* ,2006 Abstract Space Therese Tierney,2007-02-26 This visually stunning conceptually rich and imaginative book investigates the cultural connection between new media and architectural imaging Through a range of material from theoretical texts to experimental design projects Tierney explores notions of what the architectural image means today Within the book s visually imaginative design framework Abstract Space engages discourses from architecture visual and cultural studies to computer science and communications technology to present an in depth multi media case study Tracing a provisional history of the topic the book also lends a provocative and multivalent understanding to the complex relations affecting the architectural image today

Scripting Cultures Mark Burry,2013-01-30 Scripting Cultures Architectural Design and Programming With scripting computer programming becomes integral to the digital design process It provides unique opportunities for innovation enabling the designer to customise the software around their own predilections and modes of working It liberates the designer by automating many routine aspects and repetitive activities of the design process freeing up the designer to spend more time on design thinking Software that is modified through scripting offers a range of speculations that are not possible using the software only as the manufacturers intended it to be used There are also significant economic benefits to automating routines and coupling them with emerging digital fabrication technologies as time is saved at the front end and new file to factory protocols can be taken advantage of Most significantly perhaps scripting as a computing program overlay enables the tool user designer to become the new tool maker software engineer Though scripting is not new to design it is only recently that it has started to be regarded as integral to the designer s skill set rather than a technical speciality Many designers are now aware of its potential but remain hesitant This book treats scripting not only as a technical challenge requiring clear description guidance and training but also and more crucially answers the question as to why designers should script in the first place and what the cultural and theoretical implications are This book Investigates the application of scripting for productivity experimentation and design speculation Offers detailed exploration of the scripting of Gaud s final realised design for the Sagrada Fam lia leading to file to factory digital fabrication Features projects and commentary from over 30 contemporary scripting leaders including Evan Douglass Marc Fornes Sawako Kaijima Achim Menges Neri Oxman Casey Reas and Hugh Whitehead of Foster Partners *Technology Literacy Applications in Learning Environments* David D. Carbonara,2005-01-01 This book discusses the efficacy of instructional technology in various global learning environments Provided by publisher **Fundamentals of Control Engineering** Aniruddh Mohan,2025-02-20 Fundamentals of Control

Engineering explores the evolving landscape of control engineering covering classical principles and advanced methodologies Authored by experts this book provides a comprehensive understanding of control systems principles applications and challenges It adopts a multifaceted approach covering classical control theory modern strategies and specialized topics like quantum control intelligent systems and biomedical control Each chapter balances theoretical principles with practical applications making it suitable for students researchers and engineers The inclusion of advanced topics such as quantum control and intelligent systems reflects emerging technologies reshaping the field Practical examples and case studies showcase control engineering s relevance in various industries while interdisciplinary perspectives emphasize integrating control principles with fields like AI quantum mechanics and healthcare The book also addresses ethical considerations reliability issues and quantum coherence providing a holistic view of the field s opportunities and hurdles Fundamentals of Control Engineering is a valuable resource for understanding the multidisciplinary facets of control systems ideal for students researchers and professionals

Mathland Michele Emmer, 2004 The latest book in our successful series IT Revolution in Architecture provides a concise summary of how our perception of the space around us has radically changed in recent years We could even go as far as to say that we ourselves shape the space around us according to how our perceptions of the universe alter and develop and mathematics plays a pivotal role In this book the virtual protagonist of the journey through the concept of space is the square Michele Emmer born in 1945 is Professor of Mathematics at the University La Sapienza in Rome and has authored many books and films on the subject of mathematics and art and culture He was also responsible for exhibitions at the Venetian Biennale and the Cit des Sciences La Villette in Paris
