Computing and the National Science Foundation, 1950-2016 Peter A. Freeman, W. Richards Adrion, William Aspray, 2019-11-21 This organizational history relates the role of the National Science Foundation NSF in the development of modern computing Drawing upon new and existing oral histories extensive use of NSF documents and the experience of two

of the authors as senior managers this book describes how NSF's programmatic activities originated and evolved to become the primary source of funding for fundamental research in computing and information technologies. The book traces how NSF's support has provided facilities and education for computing usage by all scientific disciplines, aided in institution and professional community building, supported fundamental research in computer science and allied disciplines, and led the efforts to broaden participation in computing by all segments of society. Today the research and infrastructure facilitated by NSF computing programs are significant economic drivers of American society and industry. For example, NSF supported work that led to the first widely used web browser, Netscape, sponsored the creation of algorithms at the core of the Google search engine, facilitated the growth of the public Internet, and funded research on the scientific basis for countless other applications and technologies. NSF has advanced the development of human capital and ideas for future advances in computing and its applications. This account is the first comprehensive coverage of NSF's role in the extraordinary growth and expansion of modern computing and its use. It will appeal to historians, computing policy makers, and leaders in government and academia, and individuals interested in the history and development of computing and the NSF.

Informatics Education - The Bridge between Using and Understanding Computers Roland Mittermeir, 2006-10-28

This book constitutes the refereed proceedings of the International Conference on Informatics in Secondary Schools: Evolution and Perspectives (ISSEP 2006) held in Vilnius, Lithuania, in November 2006. The 29 revised full papers presented were carefully reviewed and selected from 204 submissions. A broad variety of topics related to teaching informatics in secondary schools is addressed. Classroom Robotics Kathleen P. King, Mark Gura, 2007-02-01 The purpose of this book is to reach out to teachers, parents, coaches, and students who may be hoping to or just investigating the possibility of how to get started with robotics. At the same time, we hope to leverage the efforts of those who have been hard at work and play in this massive movement for many years, applaud their efforts, and provide them with documentation, support, and additional resources to reach further into the possibilities they can help create for all of us in bringing the power and potential of learning through robotics to more students in the classroom and beyond. Not only does this book provide resources and firsthand insight into this exciting field, but it also provides one of a kind perspectives of curricular applications of robotics for student learning. Python Programming in Context Bradley N. Miller, David L. Ranum, 2014 The user-friendly, object-oriented programming language Python is quickly becoming the most popular introductory programming language for both students and instructors. Building on essential concepts of computer science and offering a plenitude of real-world examples, Python programming in context, Second edition, offers a thorough overview of multiple applied areas, including image processing, cryptography, astronomy, the Internet, and bioinformatics. The text's emphasis on problem solving, extrapolation, and development of independent exploration and solution building provides students with a unique and innovative approach to learning programming.
