

BEHAVIORISM (PSYCHOLOGY)

Behaviorism is a psychological theory that focuses on observable and measurable behaviors as the basis for understanding human and animal behavior.

DEFINITION

Behaviorism theory emerged in the early 20th century and focuses on observable and measurable behaviors. It holds that behavior is shaped by environmental factors (eg rewards and punishments) rather than cognitive processes. Behaviorists believe that by understanding and manipulating these environmental factors, they can change or modify behavior in predictable ways.

EXAMPLES

Study Rewards: A parent rewards a child with candy for completing their homework as a means of incentivizing and reinforcing the behavior.

Animal Training: Behaviorism can be applied in animal training by using rewards and punishments to modify their behavior. Over time, the animal will develop an association between the behavior and a reward.
