Catalog National Library of Medicine (U.S.), First multi year cumulation covers six years 1965 70 *Tangled Memories* Marita Sturken,1997-02-28 Analyzing the ways U S culture has been formed and transformed in the 80s and 90s by its response to the Vietnam War and the AIDS epidemic Marita Sturken argues that each has disrupted our conventional notions of community nation consensus and American culture She examines the relationship of camera images to the production of cultural memory the mixing of fantasy and reenactment in memory the role of trauma and survivors in creating cultural comfort and how discourses of healing can smooth over the tensions of political events Sturken s discussion encompasses a brilliant comparison of the Vietnam Veterans Memorial and the AIDS Quilt her profound reading of the Memorial as a national wailing wall one whose emphasis on the veterans and war dead has allowed the discourse of heroes sacrifice and honor to resurface at the same time that it is an implicit condemnation of war is particularly compelling The book also

includes discussions of the Kennedy assassination the Persian Gulf War the Challenger explosion and the Rodney King beating While debunking the image of the United States as a culture of amnesia Sturken also shows how remembering itself is a form of forgetting and how exclusion is a vital part of memory formation

Windows to the Womb David Chamberlain, 2013-01-15 A pioneering birth psychologist combines a lifetime's worth of research with new findings to provide a fascinating look inside the minds of unborn children In the past the invisible physical processes of fetal development were mysterious and largely unexplainable But thanks to breakthroughs in embryology interuterine photography ultrasound and other sensitive instruments of measurement we can now make systematic observations inside the womb and can see that fetuses are fully sentient aware beings In this new climate of appreciation for the surprising dimensions of fetal behavior sensitivity and intelligence Windows to the Womb brings a host of new information to light about the transformative journey each one of us undergoes in the womb Birth psychologist Dr David Chamberlain describes the amazing construction of our physical bodies the ultimate architecture and draws parallels with the expansion of our minds as our brains and senses develop and grow He also details new discoveries in embryonic and fetal research that support his own findings on the impact of the mother's emotional and physical state during pregnancy the importance of bonding at the earliest stages and the steps that expectant parents can take to ensure the most nurturing start in life for their children

Phenomenology of the Newborn Michael van Manen, 2018-11-21 Many children spend their first days weeks and sometimes months in a neonatal intensive care unit as a consequence of prematurity congenital anomalies or birth complications Their medical needs are thoughtfully appraised and attended to yet some questions are rarely asked What experiences do these newborns have What experiences are we giving them How can we and do we understand what their lives are like What are the interventions and actions of medical care actually like for them Michael van Manen explores the experiential life of newborn infants with particular consideration for those newborns who require medical care Drawing on contemporary research findings from physiology psychology biology and other disciplines he offers phenomenological insights and raises thought provoking questions as to how we ought to understand and care for such young children In our contemporary world it is often the experiences of inception of first contact with those who seem most distant foreign or even alien that we need to try to apprehend and understand The inceptual lives of newborn infants challenges us to explore those experiences phenomenologically to investigate the originary meanings of early life experiences Phenomenology of the Newborn is an essential text for researchers seeking to employ phenomenology for the study of neonatal life and related concerns that may seem inaccessible to other more traditional qualitative and quantitative methods
