Backarc Basins Tectonics And Magmatism:

Backarc Basins Brian Taylor, 2013-11-11 Experts in the field offer the first comprehensive review of the tectonics and magmatism of backarc basins covering their initial rift stage to mature spreading Complete with numerous illustrations each of the twelve chapters focuses on a young active backarc basin of the circum Pacific where volcano tectonic processes are best studied because of their activity Key themes in this volume include volcano tectonics setting cause and location rift magmas and hydrothermal activity Researchers also present models of the dynamic processes occurring in backarc basins

Intra-oceanic Subduction Systems Robert D. Larter, Philip T. Leat, 2003 Recycling of oceanic plate back into the Earth's interior at subduction zones is one of the key processes in Earth evolution Volcanic arcs which form above subduction zones are the most visible manifestations of plate tectonics the convection mechanism by which the Earth loses excess heat They are probably also the main location where new continental crust is formed the so called subduction factory About 400f modern subduction zones on Earth are intra oceanic These subduction systems are generally simpler than those at continental margins as they commonly have a shorter history of subduction and their magmas are not contaminated by ancient sialic crust They are therefore the optimum locations for studies of mantle processes and magmatic addition to the crust in subduction zones

Postcollisional Tectonics and Magmatism in the Mediterranean Region and Asia

Yildirim Dilek, Spyros Pavlides, 2006-01-01 The Mediterranean region and Asia provide a natural laboratory to investigate the driving forces of continental tectonics in an ongoing collisional orogen and the crustal and mantle response to various modes of deformation associated with plate boundary processes The multidisciplinary research efforts in this region over the last fifteen years have produced a wealth of new data to better understand the interplay and feedback mechanisms between crustal and mantle processes and the dynamic landscape evolution in a complexly deforming area A number of discrete collisional events between the Gondwana derived continental fragments i e Adria Pelagonia Arabia India and Eurasia controlled the geodynamics of the Mediterranean region and Asia during the late Mesozoic and Cenozoic This book is a collection of research papers presenting new data interpretations and syntheses on various aspects of the collision induced tectonic magmatic metamorphic and geomorphic processes that have affected the evolution of this orogenic belt It should help us better understand the mode and nature of tectonic and magmatic processes and crustal evolution in active collision zones and the distribution and causes of seismic and volcanic events and their impact on landscape evolution Publisher s

website *Geology and Tectonics of Subduction Zones: A Tribute to Gaku Kimura* Timothy Byrne, Michael B. Underwood, Donald Fisher, Lisa McNeill, Demian Saffer, Kohtaro Ujiie, Asuka Yamaguchi, 2018-07-06 This volume highlights the career of Dr Gaku Kimura professor emeritus of geosciences at the University of Tokyo by showing the spectrum of research required to understand these dynamic environments and the range of research he has inspired The first three chapters provide context for the growth of accretionary prisms by examining the thermal structure of the ocean crust and the sedimentary facies and potential fluid pathways in the Shikoku Basin Next two chapters look at the regional scale structure of the plate boundary and the rheology and hysteresis of the hanging wall of the subduction zone in SW Japan The following five chapters discuss the progressive deformation and thermal maturation of sediments along accretionary margins from Japan to New Zealand to western North America The final two chapters look at the deformation processes near the subducting plate interface with the last chapter proposing a link between outcrop scale observations and seismic slip

Geochemical and Tectonic Evolution of Arc-Backarc Hydrothermal Systems N. Shikazono, 2003-07-01 Many Neogene hydrothermal ore deposits have been formed on and near the Japanese islands from the middle Miocene to the present day and today many subaerial and submarine active geothermal systems are active This book summarizes the geochemical and tectonic features and the evolution of various types of ore deposits and current island arc and backarc hydrothermal systems in Japan starting with the Mesozoic *(Paleo-) Pacific Plate Subduction Tectonics and Related Magmatism and Mineralization* Fan Yang, Fei Xue, Gilby Jepsen, Liang Zhang, 2023-07-31 *Geodynamics of Lithosphere and Earth's Mantle* Jaroslava Plomerová, R. Geyer, 2021-06-09 This memoir is the first to review all of Antarctica's volcanism between 200 million years ago and the Present The region is still volcanically active The volume is an amalgamation of in depth syntheses which are presented within distinctly different tectonic settings Each is described in terms of 1 the volcanology and eruptive palaeoenvironments 2 petrology and origin of magma and 3 active volcanism including tephrochronology Important volcanic episodes include astonishingly voluminous mafic and felsic volcanic deposits associated with the Jurassic break up of Gondwana the construction and progressive demise of a major Jurassic to Present continental arc including back arc alkaline basalts and volcanism in a young ensialic marginal basin Miocene to Pleistocene mafic volcanism associated with post subduction slab window formation numerous Neogene alkaline volcanoes including the massive Erebus volcano and its persistent phonolitic lava lake that are widely distributed within and adjacent to one of the world's major zones of lithospheric extension the West Antarctic Rift System and very young ultrapotassic volcanism erupted subglacially and forming a world wide type example Gaussberg **Sedimentary Basin Tectonics from the Black Sea and Caucasus to the Arabian Platform** Marc Sosson, 2010 This wide area of the Alpine Himalayan belt evolved through a series of tectonic events related to the opening and closure of the Tethys Ocean In doing so it produced

the largest mountain belt of the world which extends from the Atlantic to the Pacific oceans The basins associated with this belt contain invaluable information related to mountain building processes and are the locus of rich hydrocarbon accumulations However knowledge about the geological evolution of the region is limited compared to what they offer
