Backward Shift On The Hardy Space:

The Backward Shift on the Hardy Space Joseph A. Cima, William T. Ross, 2000 Shift operators on Hilbert spaces of analytic functions play an important role in the study of bounded linear operators on Hilbert spaces since they often serve as models for various classes of linear operators For example parts of direct sums of the backward shift operator on the classical Hardy space H^2 model certain types of contraction operators and potentially have connections to understanding the invariant subspaces of a general linear operator This book is a thorough treatment of the characterization of the backward shift invariant subspaces of the well known Hardy spaces H^p The characterization of the backward shift invariant subspaces of H^p for $1 < p < \infty$ The Hardy Space of a Slit Domain Alexandru Aleman, Nathan S. Feldman, William T. Ross, 2010-01-08 If H is a Hilbert space and T on H is a continuous linear operator a natural question to ask is What are the closed subspaces M of H for which $T M \subset M$ Of course the famous invariant subspace problem asks whether or not T has any non trivial invariant subspaces This monograph is part of a long line of study of the invariant subspaces of the operator T_M multiplication by the independent variable z $i.e. M = \{f(z) \in H : f(z) = z g(z) \text{ for some } g \in H\}$ on a Hilbert space of analytic functions on a bounded domain G in $\mathbb{C}$ The characterization of these M invariant subspaces is particularly interesting since it entails both the properties z of the functions inside the domain G their zero sets for example as well as the behavior of the functions near the boundary of G The operator M is not only interesting in its own right but often serves as a model operator for certain classes of linear operators By this we mean that given an operator T on H with certain properties certain subnormal operators or two isometric operators with the right spectral properties etc there is a Hilbert space of analytic functions on a domain G for which T is unitarily equivalent to M

Interpolation and Realization Theory with Applications to Control Theory Vladimir Bolotnikov, Sanne ter Horst, André C.M. Ran, Victor Vinnikov, 2019-04-08 This volume is devoted to Joseph A. Ball's contributions to operator theory and its applications and in celebration of his seventieth birthday Joe Ball's career spans over four and a half decades starting with his work on model theory and related topics for non contractions and operators on multiply connected domains Later on more applied operator theory themes appeared in his work involving factorization and interpolation for operator valued functions with extensive applications in system and control theory He has worked on nonlinear control time varying systems and more recently on multidimensional systems and noncommutative H^∞ theory on the unit ball and polydisk and more general domains and these are only the main themes in his vast oeuvre Fourteen research papers constitute the core of this volume written by mathematicians who have collaborated with Joe or have been influenced by his vast mathematical work A curriculum vitae a publications list and a list of Joe Ball's PhD students are included in this volume as well as personal reminiscences by colleagues and friends Contributions by Yu. M. Arlinskii, S. Hassi, M. Augat, J. W. Helton, I. Klep, S. McCullough, S. Balasubramanian, U. Wijesooriya, N. Cohen, Q. Fang, S. Gorai, J. Sarkar, G. J. Groenewald, S. ter Horst, J. Jaftha, A. C. M. Ran, M. A. Kaashoek, F. van Schagen, A. Kheifets, Z. A. Lykova, N. J. Young, A. E. Ajibo, R. T. W. Martin, A. Ramanantoanina, M. J. Y. Ou, H. J.

Woerdeman A van der Schaft A Tannenbaum T T Georgiou J O Deasy and L Norton **Hilbert Spaces of Analytic Functions** Javad Mashreghi, Thomas Ransford, Kristian Seip, 2010-01-01 **Generalized Analytic Continuation** William T. Ross, Harold S. Shapiro, 2002 The theory of generalized analytic continuation studies continuations of meromorphic functions in situations where traditional theory says there is a natural boundary This broader theory touches on a remarkable array of topics in classical analysis as described in the book The authors use the strong analogy with the summability of divergent series to motivate the subject They are careful to cover the various types of continuations attempting to unify them and suggesting some open questions The book also addresses the role of such continuations in approximation theory and operator theory The introductory overview provides a useful look at the history and context of the theory Noncommutative Function-Theoretic Operator Theory and Applications Joseph A. Ball, Vladimir Bolotnikov, 2021-12-16 This concise volume shows how ideas from function and systems theory lead to new insights for noncommutative multivariable operator theory Operator and Matrix Theory, Function Spaces, and Applications Marek Ptak, Hugo J. Woerdeman, Michał Wojtylak, 2024-04-02 This volume features presentations from the International Workshop on Operator Theory and its Applications that was held in Krak w Poland September 6 10 2022 The volume reflects the wide interests of the participants and contains original research papers in the active areas of Operator Theory These interests include weighted Hardy spaces geometry of Banach spaces dilations of the tetrablock contractions Toeplitz and Hankel operators symplectic Dirac operator pseudodifferential and differential operators singular integral operators non commutative probability quasi multipliers Hilbert transform small rank perturbations spectral constants Banach Lie groupoids reproducing kernels and the Kippenhahn curve The volume includes contributions by a number of the world s leading experts and can therefore be used as an introduction to the currently active research areas in operator theory **The Dirichlet Space and Related Function Spaces** Nicola Arcozzi, Richard Rochberg, Eric T. Sawyer, Brett D. Wick, 2019-09-03 The study of the classical Dirichlet space is one of the central topics on the intersection of the theory of holomorphic functions and functional analysis It was introduced about 100 years ago and continues to be an area of active current research The theory is related to such important themes as multipliers reproducing kernels and Besov spaces among others The authors present the theory of the Dirichlet space and related spaces starting with classical results and including some quite recent achievements like Dirichlet type spaces of functions in several complex variables and the corona problem The first part of this book is an introduction to the function theory and operator theory of the classical Dirichlet space a space of holomorphic functions on the unit disk defined by a smoothness criterion The Dirichlet space is also a Hilbert space with a reproducing kernel and is the model for the dyadic Dirichlet space a sequence space defined on the dyadic tree These various viewpoints are used to study a range of topics including the Pick property multipliers Carleson measures boundary values zero sets interpolating sequences the local Dirichlet integral shift invariant subspaces and Hankel forms Recurring themes include analogies sometimes weak and

sometimes strong with the classical Hardy space and the analogy with the dyadic Dirichlet space The final chapters of the book focus on Besov spaces of holomorphic functions on the complex unit ball a class of Banach spaces generalizing the Dirichlet space Additional techniques are developed to work with the nonisotropic complex geometry including a useful invariant definition of local oscillation and a sophisticated variation on the dyadic Dirichlet space Descriptions are obtained of multipliers Carleson measures interpolating sequences and multiplier interpolating sequences estimates are obtained to prove corona theorems

Quadrature Domains and Their Applications Peter Ebenfelt, Björn Gustafsson, Dmitry Khavinson, Mihai Putinar, 2006-03-10 Quadrature domains were singled out about 30 years ago by D Aharonov and H S Shapiro in connection with an extremal problem in function theory Since then a series of coincidental discoveries put this class of planar domains at the center of crossroads of several quite independent mathematical theories e g potential theory Riemann surfaces inverse problems holomorphic partial differential equations fluid mechanics operator theory The volume is devoted to recent advances in the theory of quadrature domains illustrating well the multi facet aspects of their nature The book contains a large collection of open problems pertaining to the general theme of quadrature domains

Blaschke Products and Their Applications Javad Mashreghi, Emmanuel Fricain, 2012-10-05 Blaschke Products and Their Applications presents a collection of survey articles that examine Blaschke products and several of its applications to fields such as approximation theory differential equations dynamical systems harmonic analysis to name a few Additionally this volume illustrates the historical roots of Blaschke products and highlights key research on this topic For nearly a century Blaschke products have been researched Their boundary behaviour the asymptotic growth of various integral means and their derivatives their applications within several branches of mathematics and their membership in different function spaces and their dynamics are a few examples of where Blaschke products have shown to be important The contributions written by experts from various fields of mathematical research will engage graduate students and researchers alike bringing the reader to the forefront of research in the topic The readers will also discover the various open problems enabling them to better pursue their own research
