Americans In Space:

Americans in Space Ross Olney, 1994 Space in America Klaus Benesch, Kerstin Schmidt, 2005 America's sense of space has always been tied to what Hayden White called the narrativization of real events. If the awe inspiring manifestations of nature in America Niagara Falls Virginia's Natural Bridge the Grand Canyon etc were often used as a foil for projecting utopian visions and idealizations of the nation's exceptional place among the nations of the world the rapid technological progress and its concomitant appropriation of natural spaces served equally well as David Nye argues to promote the dominant cultural idiom of exploration and conquest. From the beginning American attitudes towards space were thus utterly contradictory if not paradoxical a paradox that scholars tried to capture in such hybrid concepts as the middle landscape Leo Marx an engineered New Earth Cecelia Tichi or the technological sublime David Nye. Not only was America's concept of space paradoxical it has always also been a contested terrain a site of continuous social and cultural conflict. Many foundational issues in American history the dislocation of Native and African Americans the geo political implications of nation building immigration and transmigration the increasing division and clustering of contemporary American society etc involve differing ideals and notions of space. Quite literally space and its various ideological appropriations formed the arena where America's search for identity national political cultural has been staged. If American democracy as Frederick Jackson Turner claimed is born of free land then its history may well be defined as the history of the fierce struggles to gain and maintain power over both the geographical social and political spaces of America and its concomitant narratives. The number and range of topics interests and critical approaches of the essays gathered here open up exciting new avenues of inquiry into the tangled contentious relations of space in America. Topics include Theories of Space Landscape Nature Technoscape Architecture Urban Utopia Literature Performance Film Visual Arts *America's Space Sentinels* Jeffrey T. Richelson, 2012-11-20 Originally published in 1999 America's Space Sentinels won the American Astronautical Society's prestigious Eugene Emme Astronautical Literature Award and quickly established itself as the definitive book for understanding a crucial component of our national defense capabilities. It focused on the emergence and evolution of the Air Force's Defense Support Program (DSP) satellite system which came on line in 1970 and continued to perform at a high level through the turn of this century and beyond. For this new edition Jeffrey Richelson covers significant developments during the last dozen years relating to the deployment of these satellites especially the struggles to develop and launch the follow on Space Based Infrared System (SBIRS) beginning in the late 1990s and continuing up to the present. The result is a book that remains the first and best source of information regarding these vital programs. As Richelson notes SBIRS like its aging but still functioning predecessor has been designed primarily to provide instant early warning of missile launches from around the globe particularly China Russia North Korea Pakistan India and Iran through the infra red sensors carried on each satellite. But the new system beset by hardware software fiscal and political problems has only managed to move forward in

fits and starts While it has done so the DSP system has continued to monitor the skies above the earth two key ground stations in Australia and Germany have closed nuclear powers Russia and the United States conferred extensively over the so called Y2K problem concerned that a computer malfunction might produce false alarms of a missile attack and worries over potential launches from nations perceived as hostile to American interests have increased substantially Appointment on the Moon Richard S. Lewis,1969 **American Space, Jewish Time** Stephen J. Whitfield,2017-07-05 This is a delightful book a small gem replete with insightful provocative pieces about both American culture and Jewish life I think that Stephen Whitfield is one of the most original essayists on these two topics Few other scholars combine the density of his knowledge with the verve of his prose Hasia R Diner New York University **Americans in Space** Ross Olney,1966 The story of the American space program from the first manned space launch in May 1961 through the rendezvous of December 1965 A concluding chapter surveys the probable future of the space program including moon explorations and other projects

Firstly, it discusses Latin America's contribution to this sector from an international relations perspective and explores the debates around the establishment of a Latin American Space Agency. It then highlights space-related capacity building, Latin America's participation in UNCOPUOS and international space activities, agreements and initiatives in Latin America. The second part is devoted to the national space infrastructures and space activities of Latin American states. It analyzes various spacefaring countries in the context of their intra-regional space relations and initiatives as well as their bilateral cooperation programs. This timely book is of interest to scholars and professionals working in the space field, especially those in Latin America and other emerging countries.
