

The background of the entire image is a photograph of a dense forest. Sunlight is streaming through the trees on the left side, creating a bright, hazy glow that fades into the darker foliage on the right. The trees are mostly bare, suggesting a late autumn or winter setting. The overall tone is serene and contemplative.

Self-Assembled Quantum Dots Zhiming M Wang, 2007-11-29 This multidisciplinary book provides up to date coverage of carrier and spin dynamics and energy transfer and structural interaction among nanostructures Coverage also includes current device applications such as quantum dot lasers and detectors as well as future applications to quantum information processing The book will serve as a reference for anyone working with or planning to work with quantum dots

Epitaxy of Nanostructures Vitaly Shchukin, Nikolai N. Ledentsov, Dieter Bimberg, 2013-03-09 The general trend in modern solid state physics and technology is to make things smaller The size of key elements in modern devices approaches the nanometer scale for both vertical and lateral dimensions Ultrathin layers or quantum wells had already gained broad acceptance for applications in micro and optoelectronics by the 1980s However the development of heterostructures with lower dimensionality quantum wires where carriers are confined in two directions and move freely in one and quantum dots where carriers are confined in all three directions took longer It became clear that quantum wire and dot structures constitute the utmost technological challenge whilst providing enormous advantages At the beginning of the 1990s a few outstanding discoveries concerning self organization phenomena at crystal surfaces for direct fabrication of nanostructures led to a change in the major paradigms of semiconductor physics and technology This new approach in epitaxy enables fast parallel fabrication of large densities of quantum dots or wires for almost unlimited material combinations and has become the basis for a powerful new branch of nanotechnology Quantum dots coherent inclusions in a semiconductor matrix with zero dimensional electronic properties persistent up to room temperature have demonstrated fascinating physical properties and given birth to a novel generation of optoelectronic devices and systems
