Brain Drug Targeting The Future Of Brain Drug Development:

Brain Drug Targeting William M. Pardridge, 2001-05-31 The thesis of this innovative and challenging book first published in 2001 is that brain drug development has been restricted by the failure of adequate brain drug targeting and that this is an increasingly urgent problem as developments in genomics lead to new generations of therapeutic macromolecules. The author, a world leader in the study of the blood brain barrier and its clinical implications, reviews the field of neurotherapeutics from the point of view of drug targeting. He surveys the scientific and clinical basis of drug delivery across biological membranes including topics such as genetically engineered trojan horses for drug targeting, antisense neurotherapeutics, and gene therapy of brain disorders. At a time when there are few significant new drug treatments in prospect for common neurological diseases, this authoritative review will encourage a wide range of clinicians and neuroscientists to reexamine the development and use of drugs in treating disorders of the central nervous system. **New**

Insights into Glioblastoma Carla Vitorino, Carmen Balana, Célia Cabral, 2023-05-17 **New Insights into Glioblastoma** Diagnosis, Therapeutics, and Theranostics provides a compendium of recent diagnostic and therapeutic advances in GBM, encompassing a pipeline of compounds and bio nanotechnology strategies that have stood out with potential increased antitumoral activity and capability to cross the blood brain barrier. Issues and challenges related to their translation into the clinical practice and their contribution to the increase in survival rates and well being of patients are addressed. This is a valuable resource for graduate students, oncologists, cancer researchers, and members of the biomedical field who need to learn more on recent developments on the management of glioblastoma. The book is split in three parts: Diagnosis focusing on biomarkers and techniques such as PET, MRI, infrared thermography, and deep neural networks; Therapeutics discussing new chemical entities as natural products and repurposed drugs, and new formulation approaches as nanotechnology based and microRNA approaches; and Theranostics explaining the role of omics system based approaches and glioblastoma microenvironment. Provides guidance towards recent advances of new chemical entities and delivery strategies targeted to glioblastoma. Includes overviews to help readers apply information in their research. Encompasses summarizing diagrams and real world examples to facilitate comprehension and enhance the applicability of the content. **Frontiers in Medicinal**
