Brain Function In Old Age:

Brain Function in Old Age H. P. Krause, F. Hoffmeister, C. Müller, 2012-12-06 Experimental gerontopsychology attempts to test causal hypotheses about old age related behavioral changes by the manipulation of age differences. An experimental treatment is introduced with the purpose of equating different age groups with respect to a potentially relevant function. If the treatment results in an assimilation of the behavior of the different age groups, age by treatment interaction differences in this function are considered as causal for the normally observed behavioral difference. If it does not result in an assimilation of the behavior of the different age groups, main effects of treatment differences in this function are considered as irrelevant for the normally observed behavioral difference. The different interpretations of age by treatment interactions and main effects of treatment in this kind of research are reasonable only if the experimental treatment actually results in an equalization of the age groups with respect to the function of interest. As is shown, such a functional equalization can neither be demonstrated nor assumed in many cases. In such cases, studies with either age group can be used to investigate hypotheses about potential causes for old age related behavioral changes. Studies with young subjects having important advantages over studies with old subjects. A test of causal relationships by age by treatment interactions is possible in cases where the experimental treatment evidently results in an equalization of the age groups with respect to the function in question. Unfortunately, the field of application for this kind of approach is rather limited.

[The Wiley Handbook on the Aging Mind and Brain](#) Matthew Rizzo, Steven Anderson, Bernd Fritzsche, 2018-03-01 A thought provoking treatise on understanding and treating the aging mind and brain. This handbook recognizes the critical issues surrounding mind and brain health by tackling overarching and pragmatic needs so as to better understand these multifaceted issues. This includes summarizing and synthesizing critical evidence, approaches and strategies from multidisciplinary research, all of which have advanced our understanding of the neural substrates of attention, perception, memory, language, decision making, motor behavior, social cognition, emotion, and other mental functions. Written by a plethora of health experts from around the world, The Wiley Handbook on the Aging Mind and Brain offers in depth contributions in 7 sections: Introduction, Methods of Assessment, Brain Functions and Behavior across the Lifespan, Cognition, Behavior and Disease, Optimizing Brain Function in Health and Disease, Forensics, Competence, Legal Ethics and Policy Issues, and Conclusion and New Directions. Geared toward improving the recognition, diagnosis, and treatment of many brain based disorders that occur in older adults and that cause disability and death, it seeks to advance the care of patients who have perceptual, cognitive, language, memory, emotional, and many other behavioral symptoms associated with these disorders. Addresses principles and practice relevant to challenges posed by the US National Academy of Sciences and National Institute of Aging (NIA). Presents materials at a scientific level that is appropriate for a wide variety of providers. The Wiley Handbook on the Aging Mind and Brain is an important text for neurologists, psychiatrists, psychologists, physiatrists, geriatricians, nurses, pharmacists, social workers, and other primary

Mobbs, 2010-05-22 A single volume of 85 articles the Handbook of the Neurobiology of Aging is an authoritative selection of relevant chapters from the Encyclopedia of Neuroscience the most comprehensive source of neuroscience information assembled to date AP Oct 2008 The study of neural aging is a central topic in neuroscience neuropsychology and gerontology Some well known age related neurological diseases include Parkinson s and Alzheimer s but even more common are problems of aging which are not due to disease but to more subtle impairments in neurobiological systems including impairments in vision memory loss muscle weakening and loss of reproductive functions changes in body weight and sleeplessness As the average age of our society increases diseases of aging become more common and conditions associated with aging need more attention by doctors and researchers This book offers an overview of topics related to neurobiological impairments which are related to the aging brain and nervous system Coverage ranges from animal models to human imaging fundamentals of age related neural changes and pathological neurodegeneration and offers an overview of structural and functional changes at the molecular systems and cognitive levels Key pathologies such as memory disorders Alzheimer s dementia Down syndrome Parkinson s and stroke are discussed as are cutting edge

interventions such as cell replacement therapy and deep brain stimulation There is no other current single volume reference with such a comprehensive coverage and depth Authors selected are the internationally renowned experts for the particular topics on which they write and the volume is richly illustrated with over 100 color figures A collection of articles reviewing our fundamental knowledge of neural aging the book provides an essential affordable reference for scientists in all areas of Neuroscience Neuropsychology and Gerontology The most comprehensive source of up to date data on the neurobiology of aging review articles cover normal sensory and cognitive aging neuroendocrine structural and molecular factors and fully address both pathology and intervention Chapters represent an authoritative selection of relevant material from the most comprehensive source of information about neuroscience ever assembled Encyclopedia of Neuroscience synthesizing information otherwise dispersed across a number of journal articles and book chapters and saving researchers the time consuming process of finding and integrating this information themselves Offering outstanding scholarship each chapter is written by an expert in the topic area and over 20% of chapters feature international contributors representing 11 countries Provides more fully vetted expert knowledge than any existing work with broad appeal for the US UK and Europe accurately crediting the contributions to research in those regions Fully explores various pathologies associated with the aging brain Alzheimer s dementia Parkinson s memory disorders stroke Down s syndrome etc Coverage of disorders and key interventions makes the volume relevant to clinicians as well as researchers Heavily illustrated with over 100 color figures

Cognitive Rehabilitation in Old Age Robert D. Hill,Lars Bäckman,Anna Stigsdotter Neely,2000 Cognitive deficits are part of the normal aging process and are exacerbated by various diseases that affect adults in old age such as dementia depression and stroke A significant scientific and social effort has been expended to evaluate whether cognitive deficits can be remedied through systematic interventions The editors as well as the chapter authors represent a variety of viewpoints that span theory as well as practice Overall they aim to address concepts in cognitive rehabilitation that are useful in intervention research research which examines problems and issues in normal and pathological aging and focusing on the application of cognitive training strategies in natural settings Thus the book is grounded in contemporary theory in cognitive aging and is applicable to both the practicing clinician as well as the researcher It is organized into four sections The first highlights prominent theoretical principles the second looks at cognitive rehabilitation strategies in normal aging the third examines the interplay between lifestyle patterns and cognitive function through applying a broad definition of lifestyle choices and the fourth focuses on rehabilitation strategies that address issues in pathological or diseased aging *Cognitive and Brain Aging: Interventions to Promote Well-Being in Old Age. Cognitive Neuroscience of Aging Roberto Cabeza,Lars Nyberg,Denise Park,2009-04-24 Until very recently our knowledge about the neural basis of cognitive aging was based on two disciplines that had very little contact with each other Whereas the neuroscience of aging investigated the effects of aging on the brain independently of age related changes in cognition the cognitive psychology of aging investigated the effects of aging on cognition independently of age related changes in the brain The lack of communication between these two disciplines is currently being addressed by an increasing number of studies that focus on the relationships between cognitive aging and cerebral aging This rapidly growing body of research has come to constitute a new discipline which may be called cognitive neuroscience of aging The goal of Cognitive Neuroscience of Aging is to introduce the reader to this new discipline at a level that is useful to both professionals and students in the domains of cognitive neuroscience cognitive psychology neuroscience neuropsychology neurology and other related areas This book is divided into four main sections The first section describes noninvasive measures of cerebral aging including structural e g volumetric MRI chemical e g dopamine PET electrophysiological e g ERPs and hemodynamic e g

fMRI and discusses how they can be linked to behavioral measures of cognitive aging. The second section reviews evidence for the effects of aging on neural activity during different cognitive functions including perception and attention, imagery, working memory, long term memory and prospective memory. The third section focuses on clinical and applied topics such as the distinction between healthy aging and Alzheimers disease and the use of cognitive training to ameliorate age related cognitive decline. The last section describes theories that relate cognitive and cerebral aging including models accounting for functional neuroimaging evidence and models supported by computer simulations. Taken together the chapters in this volume provide the first unified and comprehensive overview of the new discipline of cognitive neuroscience of aging.
