Brain And Spinal Tumours Of Childhood:

Brain and Spinal Tumors of Childhood David Walker, Giorgio Perilongo, J Punt, Roger Taylor, 2004-07-30 Children with brain and spinal tumors account for 20-25% of childhood cancers. Until the early 1990s there had been little progress in the development of new treatments and outcomes were not improving despite advances seen in other childhood cancers. During the past 10 years however there has been a dramatic increase in interest in the subject. **Brain and Spinal Tumors of Childhood** David A. Walker, Giorgio Perilongo, Roger E. Taylor, Ian F. Pollack, 2020-11-22 This second edition comes at a time of a paradigm shift in understanding of the molecular pathology and neuroscience of brain and spinal tumors of childhood and their mechanisms of growth within the developing brain. Excellent collaborative translational networks of researchers are starting to drive change in clinical practice through the need to test many ideas in trials and scientific initiatives. This text reflects the growing concern to understand the impact of the tumour and its treatment upon the full functioning of the child's developing brain and to integrate the judgments of the risks of acquiring brain damage with the risk of death and the consequences for the quality of life for those who survive. Information on the principles of treatment has been thoroughly updated. A chapter also records the extraordinary work done by advocates. All medical and allied professionals involved in any aspect of the clinical care of these patients will find this book an invaluable resource. Brain and Spinal Tumors of Childhood David A.
