ABSTRACT: In this paper, we are proposing new web based Student Annual Review Information System (SARIS) and prediction method for the success of scholar students to China Scholarship Council(CSC). The main objective of developing this system is to save the cost of paper, to reduce the risk of data loss, to decrease the processing time, to reduce the delay in finding for the successful students. The proposed system and prediction method is intended to be used by China Scholarship Council; however SARIS and prediction method are quite generic and can be used by other scholarship agencies.

Keywords – China Scholarship Council, database system, data mining, information system, student success.

I. INTRODUCTION

Every year, the China Scholarship Council is offering thousands of various types of scholarships including Chinese Government Scholarship, Confucius Institute Scholarship etc. They are offered either full or partial scholarships. These scholarships are offered for two or more years. CSC keeps track of each scholar student every year by asking the student to submit an Annual Review Form. The scholarships are continued based on the academic performance of a student. The approval/disapproval for continuing scholarship is based on few factors identified by CSC [4].

The latest inventions in science and technology have changed our lives and style of living. Technology has moved almirah of papers into Databases [1,2] and handwriting work to filling forms on the Information Systems [3] using the power of Internet [6]. One of the best solutions for computerizing manual Student Annual Review process is to develop a Management Information System [7].

The topic of this paper focuses on proposing a new web based solution named as Student Annual Review Information System (SARIS) and prediction method for successful students by using data mining [8].

Our paper is organized as follows. Section II is related with the background of the system. In section III, we have analyzed the CSC database. Section IV is related with the SARIS database model. Section V represents the SARIS application privileges and access rights. Section VI deals with the proposed prediction method for predicting the students' success. Finally, we have concluded our research work in Section VII.

II. BACKGROUND

The Information System is a set of different components used to collect, store, and process data to deliver information or knowledge. Nowadays, different types of information systems are in use. The following figure illustrates the pyramid model for information systems.
