Issues and Reviews in Teratology H. Kalter, 2012-12-06 Why Efforts to Expand the Meaning of Teratogen Are Unacceptable Disagreement about nomenclature in teratology is not new Dissent even about the very fabric of the discipline what congenital malformations consist of has often been voiced Time instead of resolving such difficulties has sometimes worsened them For example in the past it was agreed that congenital malformations are abnormalities of structure present at birth but differences of opinion concerning where the line between normal and abnormal was to be drawn prevailed It was obvious that in order to discover the causes of congenital malformations and cast strategies for their prevention it would be necessary to have knowledge of the baseline of their frequency and that this required uniformity of definition of terms Since malformations of primary social concern are those having grave outcomes and are paradoxically also the commonest ones it is logical that such conditions were the first consideration of investigators and were the defects whose frequency was considered to comprise the required baseline
