Joyce in the Belly of the Big Truck; Workbook Joyce A. Cascio, 2005-05

Celebrating Statistics A. C. Davison, Yadolah Dodge, N. Wermuth, 2005-09-22 Sir David Cox is among the most important statisticians of the past half century. He has made pioneering and highly influential contributions to a uniquely wide range of topics in statistics and applied probability. His teaching has inspired generations of students and many well-known researchers have begun as his graduate students or have worked with him at early stages of their careers. Legions of others have been stimulated and enlightened by the clear, concise and direct exposition exemplified by his many books, papers and lectures. This book presents a collection of chapters by major statistical researchers who attended a conference held at the University of Neuchâtel in July 2004 to celebrate David Cox's 80th birthday. Each chapter is carefully crafted and collectively presents current developments across a wide range of research areas from epidemiology, environmental science, finance, computing and medicine. Edited by Anthony Davison, École Polytechnique Fédérale de Lausanne, Switzerland; Yadolah Dodge, University of Neuchâtel, Switzerland; and N. Wermuth, Göteborg University, Sweden, with chapters by Ole E. Barndorff-Nielsen, Sarah C. Darby, Christina Davies, Peter J. Diggle, David Firth, Peter Hall, Valerie S. Isham, Kung-Yee Liang, Peter McCullagh, Paul McGale, Amilcare Porporato, Nancy Reid, Brian D. Ripley, Ignacio Rodríguez Iturbide, Andrea Rotnitzky, Neil Shephard, Scott L. Zeger, and including a brief biography of David Cox, this book is suitable for students of statistics, epidemiology, environmental science, finance, computing and medicine, and academic and practising statisticians.

Selected Statistical Papers of Sir David Cox: Foundations of statistical inference, theoretical statistics, time series and stochastic processes David Roxbee Cox, 2005 Sir David Cox is one of the seminal statistical thinkers of the 20th and 21st centuries. In this selection of his work, Cox reviews his most influential and interesting papers published before 1993.

AMSTAT News American Statistical Association, 2006

Journal of the American Statistical Association, 1993 A scientific and educational journal not only for professional statisticians but also for economists, business executives, research directors, government officials, university professors and others who are seriously interested in the application of statistical methods to practical problems in the development of more useful methods and in the improvement of basic statistical data.

Causality from the Point of View of Statistics José A. Ferreira, 2023-08-21 Most are familiar with the adage correlation does not imply causation. Since much of science is concerned with problems of causality and statistics is so widely used in research, one may wonder whether statistics possesses the tools to study such problems and contribute to their resolution.

These were the questions posed over thirty years ago by Pearl Robins Rubin Shafer etc when they set out to incorporate notions of causality into statistics theory and develop methods for estimating causal relationships Since then the schools of statistical causality they founded have produced interesting results and methods that help us think about causality and are potentially useful in real life problems Yet despite its appeal statistical causality is still disregarded by many mainstream statisticians and its methods are not widely known In part this is explained by the unorthodox and apparently disparate character of the various schools in particular by the distinct languages they developed and that are not readily accessible Thus even some advanced researchers seemed startled by things like Rubin s counterfactuals that in one guise or another appear in all theories but that seem potentially incompatible with Kolmogorov s formalism the very foundation of statistics It turns out that statistical causality is firmly rooted in Kolmogorov s axiomatization of probability as the elements required by it are essentially those proposed a century ago by Steinhaus and perhaps surprisingly that statistics has always engaged with causality The present book makes this plain providing a basis for statistical causality that subsumes and reconciles the theories of all other schools and that to a mainstream statistician will appear entirely familiar and natural
