Aquaculture and the Environment T. V. R. Pillay, 2008-04-15 Aquaculture and the Environment Second Edition T V R Pillay The continuing rapid increases in aquaculture production world wide raise fears of further environmental degradation of the aquatic environment The second edition of this well received book brings together and discusses the available information on all major environmental aspects of various aquaculture systems providing a valuable aid to the preparation of environmental impact assessments of aquaculture projects and showing how potential environmental problems can be reduced or mitigated by sound management Much new information is presented in this new edition including details of the impact of genetically modified food products and a new chapter on the sustainability of aquaculture which covers the definitions of sustainability and responsible aquaculture environmental economic social and ethical aspects of sustainability and the concept of ecotechnology in fish farming Aquaculture and the Environment Second Edition is essential reading for all personnel working on fish farms and for those moving into the aquatic farm business Environmental scientists ecologists conservationists fish and shellfish biologist and all those involved in the preservation of aquatic environments will find much of great use and interest within the covers of this book Libraries in all universities and research establishments where these subjects are studied and taught should have copies of this excellent and useful book on their shelves Dr T V R Pillay was formerly Programme Director Aquaculture Development and Coordination Programme Food and Agriculture Organization of the United Nations

Environmental Impacts of Aquaculture Kenneth D. Black, 2001 The continued expansion of aquaculture in a wide range of environments and of a growing number of species has lead to increasing demands on aquatic resources These demands vary with the culture species the culture method and the environmental and ecological setting While there are many examples of efforts to mitigate detrimental environmental effects the environment remains the ultimate constraint on the future sustainable development of this maturing industry The relationships between the activities of aquaculture and the environment are therefore of economic importance as well as of scientific interest and for these reasons a large international research community has developed over the past decade In this volume the resultant research is synthesised and critically reviewed providing a source of reference to the most important recent developments at research and professional level The authors are internationally recognised authorities who have made significant contributions to their respective research areas The first part of the volume is organised in terms of the major culture types This is followed by chapters of general relevance to aquaculture The volume is designed to complement *Biology of Farmed Fish* eds K D Black A D Pickering also published in this series It is directed at fish biologists shellfish biologists and environmental scientists working in the academic governmental and industrial sectors

Aquaculture in the Ecosystem Marianne Holmer,Kenny Black,Carlos M. Duarte,Nuria Marbà,Ioannis Karakassis,2007-12-29 This book provides a scientific forecast of development in aquaculture with a focus on the environmental technological social and economic constraints that need to be resolved to ensure sustainable development of the industry and allow the industry to be able to feed healthy seafood products to future generations The chapters discuss the most critical bottlenecks of the development They encompass subjects of understanding the environmental impacts the current state of the art in monitoring programs and in coastal zone management the important interactions between wild and cultured organisms including release of non native species into the wild

Aquaculture and the Environment Roger Creed,2015 Aquaculture is the science of cultivating aquatic animals and plants in fresh or marine waters It is the extended version of fishing derived from the fact that harvests of wild sources of fish and other aquatic species cannot keep up with the demand of an increasing human population Amplification of aquaculture can result in less concern for the environment and therefore the first prerequisite for sustainable aquaculture is clean water However poor management of aquatic species production can alter or even destroy existing wild habitats increase local pollution levels or negatively impact local species Keeping this in mind aquatic managers along with scientists are searching for modern and more efficient solutions to various issues regarding fish farming This book offers recent research outcomes on the relationship between aquaculture and environment and consists of case studies from all over the world with the goal of improving and performing sustainable aquaculture
