

Environmental Impacts of Open-Ocean Aquaculture

Fish Meal & Fish Oil

Using wild-caught fish to feed farmed fish puts additional pressure on these populations and can impact other wildlife that depends on them for food.

Drugs & Chemicals

When used, antibiotics, parasiticides, and other chemicals flow out of pens and can affect wild fish as well as the broader marine ecosystem.

Escaped Fish

Escaped fish compete for food and habitat, transmit diseases, and prey on and breed with local fish, reducing the health of wild populations.

Fish Waste

Fish waste flows out into the ocean, adding potentially harmful extra nutrients to the ecosystem. Uneaten food can also build up on the ocean floor underneath pens, altering the abundance and biodiversity of these communities.

Diseases & Parasites

Disease, pathogens, and parasites can multiply in crowded pens and rapidly spread to wild fish.

Predators

Seals, sea lions, sharks, birds, and other marine wildlife can become entangled in fish pens. The use of deterrents like underwater loudspeakers can alter the natural behavior of predators.

Aquaculture And The Environment In The European Community
