Bisphosphonates For Bones Prevention And Therapy:

Osteoporosis: Genetics, Prevention and Treatment John S. Adams, Barbara P. Lukert, 2012-12-06 Modern society is altering the lifestyle and longevity of its members much more quickly than evolutionary adaptation to these changes can take place. The problem of calcium deficiency in the population is compounded by the growing percentage of aged individuals with relatively fragile, less massive skeletons. Current day civilizations are much more effective in prolonging human life in a state of relative debility than even a few decades ago. This reality is unlikely to change and mandates that we develop strategies to prevent aging related diseases like osteoporosis before they become manifest. Osteoporosis: Genetics, Prevention and Treatment places emphasis on the 1 genetic predisposition, 2 early recognition and 3 prevention of osteoporosis. The intent is not to move the practitioner's attention away from intervention therapy of osteoporosis but rather to expand their view of this disease as one beginning at birth and one in which susceptibility is manifest at the conclusion of adolescence, not at menopause. The book concludes with an informed view of the future in terms of the recognition, prevention and management of osteoporosis. **Osteoporosis: A Guide to Prevention & Treatment** Robert Lindsay, 1992 **Prevention of Bone**

Metastases Markus Joerger, Michael Gnant, 2012-02-03 Bone metastases continue to be a major cause of morbidity in cancer patients but improved understanding of the biology of bone metastases has led to the identification of drugs that are of potential value in not only their treatment but also their prevention. This book, written by recognized experts in the field, provides a detailed overview of current knowledge on this subject. One important focus of the book is the efficacy of bisphosphonates in preventing bone metastases in patients with breast, lung and prostate cancer and disease progression in cases of multiple myeloma. The combined use of bisphosphonates and cytostatics is also discussed with a report on first clinical data. Further topics addressed include the significance of the bone microenvironment, special issues in the elderly patient, the use of bone turnover markers and initial findings obtained with denosumab. Bisphosphonates and Osteonecrosis of the Jaw: A Multidisciplinary Approach Francesco Saverio De Ponte, 2011-11-25 During the early 19th century it was discovered that adding yellow now called white phosphorous to matchstick heads made it easier to ignite matches The phosphorous vapors were breathed in by workers and combined with other chemicals in the body to produce a potent nitrogen containing bisphosphonate Today s oral nitrogen containing bisphosphonates and intravenous nitrogen containing bisphosphonates circulate around the body the same way as the phosphorous vapors and are absorbed into bone and ingested by osteoclasts When this unique binding process of bisphosphonates to bone occurs osteoclasts are poisoned and this reduces or eliminates bone turnover Alveolar bone in the mandible and maxilla turns over more rapidly than in long bones so the jaws are a better target for bisphosphonate toxicity It wasn t until 2003 that today s intravenous and oral nitrogen containing bisphosphonate medications were implicated as major risk factors in the development of exposed necrotic bone of the jaws Most of the researchers who reported cases of bisphosphonate induced osteonecrosis of the jaw found that these patients were treated with zoledronate pamidronate or a combination of these drugs which are commonly used for treating breast cancer or myeloma In about 5% of cases subjects with BIONJ were being treated for osteoporosis Precipitating events that contribute to BIONJ are tooth extractions about 50% of cases mandibular exostoses periodontal disease and local trauma from ill fitting dentures It is not known if the placement of dental implants is a precipitating factor The book aims to meet the need of medical practitioners working in all fields that use bisphosphonates and to present the conservative and surgical treatment methods currently in use There will also be detailed information on the literature relating to dental implants in patients treated with bisphosphonates
